Module description Catalog Program in Data Science

FACULTY OF MATHEMATICS AND COMPUTER SCIENCE
UNIVERSITY OF SCIENCE
VIETNAM NATIONAL UNIVERISTY HO CHI MINH CITY

Contents

I. GENERAL EDUCATION 1
Basic Economics - BAA00005 1
Earth Science - GEO00002 3
English 1 - BAA00011 4
English 2 - BAA00012 6
English 3 - BAA00013 8
English 4 - BAA00014 9
Environmental Studies - ENV00001 11
General Biology I - BIO00001 13
General Biology II - BIO00002 15
General Chemistry 1 - CHE00001 17
General Chemistry 2 - CHE00002 19
General Chemistry Laboratory 1 - CHE00081 20
General Chemistry Laboratory 2 - CHE00082 21
General Law - BAA00004 22
General Physics 1 (Mechanics and Thermodynamics) - PHY00001 24
General Physics 2 (Electromagnetism - Optics) - PHY00002 26
History of Vietnamese Communist Party - BAA00104 27
Ho Chi Minh's Ideology - BAA00003 29
Human and Environment - ENV00003 31
Introduction to Informatics - CSC00003 33
Labwork on General Biology I - BIO00081 35
Labwork on General Biology II - BIO00082 37
General Physics Lab - PHY00081 40
Marxist-Leninist Philosophy - BAA00101 41
Marxist-Leninist Political Economy - BAA00102 43
Psychology - BAA00006 45
Scientific Socialism - BAA00103 47
Teamwork and Learning Skills - BAA00008 49
Calculus 1B - MTH00003 50
Calculus 1B Practice - MTH00081 51
Calculus 2B - MTH00004 53

Calculus 2B Practice - MTH00082 54
Linear Algebra - MTH00030 55
Linear Algebra Practice - MTH00083 57
Discrete Mathematics - MTH00041 58
Discrete Mathematics Practice - MTH00086 60
Combinatorics - MTH00050 61
Probability and Statistics - MTH00040 63
Probability and Statistics Practice - MTH00085 65
Introduction to Computer Programming - MTH00055 66
Computational Software Laboratory - MTH00087 68
II. PROFESSIONAL EDUCATION KNOWLEDGE 70
1. BASIC KNOWLEDGE 70
Advanced Programming - MTH10107 70
Data Structures and Algorithms - MTH10405 71
Object-Oriented Programming - MTH10407 73
Introduction to Database Systems - MTH10312 74
Computer Networks - MTH10311 76
Mathematical Statistics - MTH10404 77
Introduction to Data Science - MTH10171 79
2. COMPULSORY COURSES 81
Introduction to Artificial Intelligence - MTH10318 81
Data Mining - MTH10358 82
Introduction to Machine Learning - MTH10353 84
Python for Data Science - MTH10605 86
3. ELECTIVE COURSES 89
Multivariate Statistics - MTH10619 89
Analysis of Statistical Data - MTH10513 90
Linear programming - MTH10449 92
Optimization Algorithms - MTH10450 94
Operations Research - MTH10446 95
Social Network Analysis - MTH10624 97
Mathematical Finance Models - MTH10203 99
Database Management System - MTH10344 101

Introduction to Big Data - MTH10606 102
Parallel Programming - MTH10352 105
Advanced Machine Learning - MTH10354 107
Data visualization - MTH10608 109
Numerical Methods for Data Science - MTH10607 111
Deep Learning for Data Science - MTH10622 113
Recommender System - MTH10623 115
Seminar on Data Science - MTH10620 117
4. GRADUATING WORKS 119
Graduation Thesis - MTH10595 119
Internship - MTH10549 120
Soft Skills - MTH10626 121
Entrepreneurship - MTH10627 123
Graduation Project - MTH10597 124

I. GENERAL EDUCATION

Basic Economics - BAA00005

Module designation	Basic Economics
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	MSc. Le Nhan My
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture
Workload (incl. contact hours, self-study hours)	Total workload: 90 hours. Contact hours (lecture): 30 hours. Private study including examination preparation, specified in hours: 60 hours.
Credit points	2 Credits (3 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Knowledge: Forming and developing (one step) capacity to collect information, skills to synthesize and systematize issues in an overall relationship; skills to compare, analyze, comment, and evaluate micro-economic issues. Grasp the basic content of Microeconomics - a part of economics. Specifically: • Understand the theory of economic choice, the influence of the law of scarcity, and economic models on economic choice. • Understand the theory of supply and demand. • Understand the theory of consumer behavior. • Understand the theory of producer behavior. • Understand the theory of competition and monopoly. • Understand the theory of factor markets. • Understand the theory of the role of government.

	• Understand the analysis of the influence of factors on the balance of the market, in terms of skills. • Having the ability to apply the knowledge learned to study the nature of economic phenomena, the laws, and trends of the phenomena, and the laws of the market economy. • Ability to apply the knowledge learned in the study of macroeconomics, development economics, and several other economic subjects. Skills: • Forming and developing (one step) capacity to collect information, skills to synthesize and systematize issues in an overall relationship; skills to compare, analyze, comment, and evaluate micro-economic issues. • Develop reasoning and public speaking skills. Attitude: • Trying to be righteous in recognizing and evaluating the lines, policies, and laws of the State of Vietnam in the development of the market economy with the state's regulation. Other Objectives: • Through presentations and problem-solving. Forming and developing collaboration and teamwork skills. • Develop skills of creative thinking, discovery, and discovery. • Cultivate and develop assessment and self-assessment capacity. • Develop public speaking and commenting skills.
Content	The course presents some basic problems of economics; principles of economics, supply and demand patterns and market equilibrium; theory of consumer behavior and business behavior; types of markets; aggregate supply, aggregate demand, and measure national output. The module includes the following chapters: Chapter 1: Economics and Fundamental Issues Chapter 2: Markets, Supply and Demand, and Market Equilibrium Chapter 3: Theory of Consumer Behavior

	Chapter 4: Production Cost Theory and Profit Maximization Chapter 5: National Output Measurement, Inflation, and Unemployment
Examination forms	Homework: 20%. Midterm exam: 20%. Final exam: 60%.
Study and examination requirements	Regulations on time, attendance, and discipline in the course: attend class on time and at least 70% of the sessions (only to be absent for a maximum of 30%). Exam ban is applied to those who miss more than the regulated number of sessions. Students must have all test scores, lively discussions, constructive and serious statements in class.
Reading list	None

Earth Science - GEO00002

Module designation	Earth science
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	Lecturers at Faculty of Geology, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture
Workload (incl. contact hours, self-study hours)	Total: 60 hours. Contact hours: 30 lectures hours (in class) Private study: 30 hours (self-study)
Credit points	2 Credits (3 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Earth Science introduces general knowledge about the Earth related to the rights of the Earth, inside and outside the Earth including position and operation of the earth in space; composition and structure of the atmosphere, wind, and

	weather, climate, climate change; distribution of freshwater in hydrosphere, sea and ocean behaviour, El Nino-La Nina phenomena: Geosphere: composition and structure of the earth's crust, weathering, erosion-accumulation, landslides, the internal structure of the earth, earthquakes, volcanoes, plate tectonic activities; learn about the history of the earth through the record of fossil remains. Knowledge of Earth science is a necessary basis for understanding the natural environment of the Earth.
Content	1. Presentation on deformations of the earth's crust and earthquake, volcanic activities and membrane tectonic mechanism. 2. Learn about Earth's history through fossil and stratigraphic records. 3. Apply this knowledge to explain some issues in the main profession. 4. Skilled in group discussion, presentation and criticism Attitude, diligence: enthusiasm, honesty in learning; Serious and honest in checking.
Examination forms	Writing (Midterm: 30%, Final exam: 70%)
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. *Earth Science*, DANIELSON, E.W., DENECKE. EJ. Ir. 1986. 2. *Foundations of Earth Science*, Lutgens Frederick K. Tarbuck Edward, 1, 1997. 3. *Earth Science Textbook*, LUU DUC HAI, TRAN NGHI. 2008.

English 1 - BAA00011

Module designation	English 1
Semester(s) in which the module is taught	1st semester
Person responsible for the module	Lecturers at Foreign language centre of University of Science, VNU-HCM
Language	English
Relation to curriculum	Compulsory
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems

Workload (incl. contact hours, self-study hours)	Total: 120 hours. Contact hours: lectures 30 hours; 30 exercise hours Private study: 60 hours (self-study)
Credit points	3 Credits (5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Upon completing this course, learners will enhance their basic knowledge of general English of vocabulary and grammar in four skills: Listening, Speaking, Reading, and Writing. Here are the objectives in detail: Learners will be able to understand and use vocabulary in various topics such as leisure activities, important life events, emotion, attitude, physical appearance description, travel plans, presenting dreams, countries, people, and languages. Learners can understand and use grammar structures at the pre-intermediate level such as basic tenses and other related matters. Learners will be able to choose the answer that best describes the given picture, choose the correct response to the questions, and understand dialogues and short monologues. Learners will be able to pronounce single words, word clusters and sentences, describe a given picture, and build basic communications in daily life. Learners will be able to comprehend 300-500 words passage of familiar topics and gain more knowledge of different cultures around the world. Learners can write essays about familiar topics related to daily life, learning activities, entertainment, events, etc.

Content	This course is designed for non-English major students at the University of Science - Vietnam National University - Hochiminh City, using the first eight modules in the book New Cutting Edge (Pre-intermediate). These modules cover vocabulary, grammar, reading, listening, speaking, and writing in a wide range of topics such as leisure activities, important life events, feelings and emotions, attitudes, physical appearance descriptions, travel plans, presenting dreams, countries, people, and languages. Students need to complete various tasks, including presentations, debates, role-plays, assignments, tests and so on.
Examination forms	Midterm and final exam: written exams.
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. Sarah Cunningham, Peter Moor, Jane Cornyns Carr (2005). *New Cutting Edge, pre-intermediate: student's book*. Harlow: Pearson Education. 2. Sarah Cunningham, Peter Moor, Jane Cornyns Carr (2005). *New Cutting Edge, pre-intermediate: workbook*. Harlow: Pearson Education.

English 2 - BAA00012

Module designation	English 2
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	Lecturers at Foreign Language Centre of University of Science, VNU-HCM
Language	English
Relation to curriculum	Compulsory
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	Total: 120 hours. Contact hours: lectures 30 hours; 30 exercise hours Private study: 60 hours (self-study)
Credit points	3 Credits (5 ECTS)

Required and recommended prerequisites for joining the module	Required prerequisites: • English 1 (BAA00011)
Module objectives/intended learning outcomes	Upon completing this course, learners will enhance their basic knowledge of general English of vocabulary and grammar in four skills: Listening, Speaking, Reading and Writing. Here are the objectives in detail: Learners will be able to understand and use vocabulary in various topics such as everyday items, important life events, holiday plans, health problems, hobbies and interests, personalities, finance- related issues. Learners can understand and use grammar structures in pre-intermediate level such as basic tenses and more complex grammatical structures including conditional sentences, passive, and verb patterns. Learners will be able to choose the correct response for the questions and understand dialogues and short monologues. Learners will be able to pronounce words, generate short conversations, discuss real-life familiar topics, understand, and quickly respond to generated questions, and improve basic communication skills in daily life. Learners will be able to comprehend 500 - 700 words passage of familiar topics and gain more knowledge of different cultures around the world. Learners can write appropriate responses to written requests or complaints in business and social contexts, applying theories into real life practice.
Content	This course is designed for non-English major students at the University of Science - Vietnam National University - Ho Chi Minh City, using seven modules (modules 09-15) in the book New Cutting Edge (Pre-intermediate). These modules cover vocabulary, grammar, reading, listening, speaking and writing in a wide range of topics such as everyday items, important life events, holiday plans, health problems, hobbies and interests, personalities, and finance-related issues. Students need to complete various tasks, including presentations, debates, role-plays, assignments, tests and so on.

Examination forms	Writing (Midterm: 30%, Final exam: 70%)
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. Sarah Cunningham, Peter Moor, Jane Cornyns Carr (2005). *New Cutting Edge, pre-intermediate: student's book*. Harlow: Pearson Education. 2. Sarah Cunningham, Peter Moor, Jane Cornyns Carr (2005). *New Cutting Edge, pre-intermediate: workbook*. Harlow: Pearson Education.

English 3 - BAA00013

Module designation	English 3
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Lecturers at Foreign Language Centre of University of Science, VNU-HCM
Language	English
Relation to curriculum	Compulsory
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	Total: 120 hours. Contact hours: lectures 30 hours; 30 exercise hours. Private study: 60 hours (self-study)
Credit points	3 Credits (5 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: • English 2 (BAA00012)
Module objectives/intended learning outcomes	Upon completing this course, learners will enhance their basic knowledge of general English of vocabulary and grammar in four skills: Listening, Speaking, Reading and Writing. Here are the objectives in detail: Learners will be able to understand and use vocabulary in various topics such as leisure activities, important life

	events, emotion, attitude, physical appearance description, travel plans, dreams, countries, people, and languages. Learners can understand and use new languages in a natural, communicative way. Learners will be able to present their opinions about some social and cultural issues and understand dialogues and talks. Learners will be able to comprehend 500-700 words passages of familiar topics and gain more knowledge of different cultures around the world. Learners can write paragraphs about familiar topics related to daily life, learning activities, entertainment, events, etc.
Content	This course is designed for non-English majors at the University of Science - Vietnam National University - Ho Chi Minh City, using the first six modules in the book New Cutting Edge (Intermediate). These modules cover vocabulary, grammar, reading, listening, speaking and writing in a wide range of topics, namely leisure activities, important life events, feelings and emotions, attitudes, physical appearance descriptions, travel plans, presenting dreams, countries, people, and languages. Students need to complete various tasks, including presentations, debates, role-plays, doing homework, tests and so on.
Examination forms	Writing (Midterm: 30%, Final exam: 70%)
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. Sarah Cunningham, Peter Moor, Jane Cornyns Carr (2005). *New Cutting Edge, pre-intermediate: student's book*. Harlow: Pearson Education. 2. Sarah Cunningham, Peter Moor, Jane Cornyns Carr (2005). *New Cutting Edge, pre-intermediate: workbook*. Harlow: Pearson Education. 3. Materials prepared by the lecturer.

English 4 - BAA00014

Module designation	English 4
Semester(s) in which the module is taught	4th semester

Person responsible for the module	Lecturers at Foreign Language Centre of University of Science, VNU-HCM
Language	English
Relation to curriculum	Compulsory
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	Total: 120 hours. Contact hours: lectures 30 hours; 30 exercise hours. Private study: 60 hours (self-study)
Credit points	3 Credits (5 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: • English 3 (BAA00013)
Module objectives/intended learning outcomes	Upon completing this course, learners will enhance their intermediate knowledge of general English of vocabulary and grammar in four skills: Listening, Speaking, Reading and Writing. Here are the objectives in detail: Learners can understand and use the language needed in more complex real-life situations in a natural, communicative way. Learners will be able to express their own ideas in interviews, mini-talks, problem-solving and storytelling. Learners will be able to comprehend 700-1000 words passages of up-to-date topics of international interest and learn more about the world and other cultures. Learners can write essays about familiar topics related to daily life, learning activities, entertainment, events, etc.
Content	This course is designed for non-English majors at the University of Science - Vietnam National University - Ho Chi Minh City, using six modules (modules 07-12) in the book New Cutting Edge (Intermediate). These modules cover vocabulary, grammar, reading, listening, speaking and writing in a wide range of topics namely everyday items, important life events, holiday plans, health problems, hobbies and interests, personalities, and finance-related issues. Students need to complete various tasks, including

	presentations, debates, role-plays, doing homework, tests and so on.
Examination forms	None
Study and examination requirements	Mid-term test: 50% Final test: 50%
Reading list	1. Sarah Cunningham, Peter Moor, Jane Cornyns Carr (2005). *New Cutting Edge, Intermediate: student's book*. Harlow: Pearson Education. 2. Sarah Cunningham, Peter Moor, Jane Cornyns Carr (2005). *New Cutting Edge, Intermediate: workbook.* Harlow: Pearson Education. 3. Materials prepared by the lecturer (2012). *Collins Skills for the TOEIC test: Speaking and Writing*. Harper Collins UK.

Environmental Studies - ENV00001

Module designation	Environmental Studies
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	Lecturers at Faculty of Environment, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture
Workload (incl. contact hours, self-study hours)	90 hours Contact hours: lectures 30 hours (in class) Private study: 60 hours (self-study)
Credit points	2 Credits (3 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	This is a compulsory subject in the general knowledge block in the training program for students of all disciplines. The focus of this module is to provide basic knowledge of Environmental Science: concepts, classification of resources,

	environment, basic problems and core of the environment. Students are also introduced to measures to protect the environment, conserve resources towards the goal of sustainable development.
Content	Chapter 1: Overview of the Environment General concepts of environment Chapter 2: Basic composition of the environment (volumes) Chapter 3: Natural Resources 3.1 Definition 3.2 Classification 3.3 General issues of natural disaster Chapter 4: Human Impact on the environment 4.1 History of human impact on the environment 4.2 Human impact on environmental components Chapter 5: Environmental issues and sustainable development 5.1 Population and environment 5.2 Environmental pollution 5.3 Climate change 5.4 Sustainable development Chapter 6: Environmental management and Environmental Education
Examination forms	Midterm and final exam: written exams.
Study and examination requirements	Midterm test: 30% Final test: 70%
Reading list	Textbooks: 1. *Lecture on General Environment*. (in Vietnamese). compiled by a group of teachers. 2. Le Van Khoa (Editor), 2004. *Environmental Science* (in Vietnamese). Education Publishing House. References 1. Le Van Khoa, Doan Van Canh, Nguyen Quang Hung, Lam Minh Triet (2011). *Textbook of People and the*

	Environment. (in Vietnamese). Education Publishing House. 2. Goudie, A. (2006) *The Human Impact on Natural Environment*. 6th Edition. Oxford, Blackwell. 3. Le Thi Thanh Mai (2008), *Textbook of People and the Environment*. VNU-HCM Press.

General Biology I - BIO00001

Module designation	General Biology I
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Lecturers at Faculty of Biology and Biotechnology, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	This course introduces the topic, gives questions, asks students to see the clip, discusses and reviews
Workload (incl. contact hours, self-study hours)	Total workload: 135 Contact hours (please specify whether lecture, exercise, laboratory session, etc.): - Lecture hours: 45 - Practical hours: 0 - Exercise hours: 0 - Extra-contact hours per week: 0 Private study including examination preparation, specified in hours: 90 hours
Credit points	3 Credits (4.5 ECTS)

Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Know the fundamental concepts of biology and the scientific process; distinguish observation, hypothesis, test, and theory Explain the chemical composition of living matter, and chemical reaction related to biology Describe the structure and properties of water, structure and function of large biology molecules Distinguish the structure and function of cells, membranes and cellular organelles Describe metabolism at the cellular level, including enzyme activity, cellular respiration, and photosynthesis. Describe DNA structure and function, including replication and repair, transcription, and translation. Describe the mechanism of genetic: cell division, fertilization, mutation, and genetic variation. Explain Biotechnology Explain the evolution and biodiversity Describe the concepts and mechanisms of the origin of species
Content	Introduction to Biology: The fundamental concepts in biology The scientific methods to study the life Part 1. The chemical of life Part 2. The Cell Part 3. Genetics Part 4. Mechanisms of Evolution Conclusion
Examination forms	Multiple choice test

Study and examination requirements	Students create groups: listen, write, and give questions and answers. 6 Quizzes - Midterm examination - Final examination
Reading list	Textbooks 1. Bui Trang Viet (2012). *Cell Biology* (in Vietnamese). VNU-HCM Press. 2. Pham Thanh Ho (2011). *Biology: Cell, genetics and evolution* (in Vietnamese). VNU-HCM Press. Supplementary reading 1. Reece J. B., Urry, L. A., Cain M. L. 1., Wasserman S. A., Minorsky P. V., Jackson R.B., & Campbell N. A. (2014). *Campbell Biology* (1st edition), Pearson. 2. Lecture slides and related clips.

General Biology II - BIO00002

Module designation	General Biology II
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Lecturers at Faculty of Biology and Biotechnology, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecturing, posing questions for discussions, presenting videos, giving homework
Workload (incl. contact hours, self-study hours)	(Estimated) Total workload: 135 Contact hours (please specify whether lecture, exercise, laboratory session, etc.): - Lecture hours: 45 - Practical hours: 0

	- Exercise hours: 0 - Extra-contact hours per week: 0 Private study including examination preparation, specified in hours: 90 hours
Credit points	3 Credits (4.5 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: None Recommended prerequisites: General Biology I (BIO00001)
Module objectives/intended learning outcomes	PART 1. PLANT MORPHOLOGY AND FUNCTION Learners get to know about plant morphology, functions, and their ecological relationships. They explore nutrient absorption, material transport in vascular plants, and the vital role of soils in providing nutrients. Additionally, they examine plant life cycles, reproductive systems, and how plants respond to environmental cues for survival. PART 2. ANIMAL MORPHOLOGY AND FUNCTION Learners explore the correlation between animal anatomy and physiology. They delve into the structure and functions of key systems including digestion, circulation, respiration, immunity, endocrinology, reproduction, and the nervous system. Additionally, they study osmoregulation, excretion processes, and the mechanisms underlying animal sensation and movement. PART 3. ECOLOGY Learners explore ecological factors and their impact on organisms, studying adaptation strategies. They learn about ecosystem components, structural dynamics, functional processes, material and energy cycling, and equilibrium within ecosystems. Concepts of population dynamics, community interactions, and biosphere principles are also covered, along with the significance of biodiversity conservation for sustaining ecosystems locally in Vietnam and globally.
Content	Part 1. Plant Morphology and Function

	Part 2. Animal Form and Function Part 3. Ecology
Examination forms	Multiple choice test
Study and examination requirements	None
Reading list	1. Begon M., J.L. Harper, and C.R. Townsend (1986). *Ecology: Individuals, Populations and Communities*. Blackwell Scientific Publications. 2. Brooker, R.J, Widmaier E.P; Graham L.E and Stiling P.D. (214). *Biology*. McGraw-Hill. 3. Campbell N.A, J.B. Reece, L.A. Urry, M.I. Cain, S.A. Wasserman, P.V. Minorsky, and R. B. Jackson (214). *Biology* (1st Edition). Pearson, Benjamin Cummings. 4. Stiling P. D. (22). *Ecology: Theories and Applications* (Fourth Edition). Prentice-Hall, Inc. 5. Smith A.M; Coupland G; Dolan L; Harberd N; Jones J; Martin C; Sablowski R; and Amey A. (21). *Plant Biology*. Garland Science.

General Chemistry 1 - CHE00001

Module designation	General Chemistry 1
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Lecturers at Faculty of Chemistry, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	150 Hours Contact hours: Lectures: 30 hours (in class) Exercise: 30 hours Private study: 90 hours (self-study)

Credit points	3 Credits (5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	This subject is the first Chemistry subject for students of Chemistry and Materials Science. The subject deals with the theoretical foundations of Chemistry related to the basic models of the atomic structure, the periodic changes in the properties of chemical elements, the fundamental forces of interaction in the matter, and the influence of chemical elements. their influence on the properties of matter in the solid, liquid, and gaseous states.
Content	1. Describe the structure of atoms and molecules. 2. Explain periodic changes in some properties of chemical elements. 3. Identify and distinguish basic types of chemical bonds. 4. Identify and explain the relationship between the fundamental forces of interaction in matter and the physical properties of matter.
Examination forms	Written exam Midterm test: 30% Final test: 70%
Study and examination requirements	Minimum attendance at lectures is 80% Final score is greater or equal to 5.0/10.0
Reading list	Textbooks: 1. Nguyen Dinh Chi (2007). *General Chemistry* (in Vietnamese). Hanoi Education Publishing House. 2. Nguyen Dinh Soa (2000). *General Chemistry* (in Vietnamese). VNU-HCM Press. 3. Petrucci, R.H; Harwood, W.S; Herring, F.G (2002). *General Chemistry*. 8th Ed. USA: Prentice Hall. Others: 1. Le Thi So Nhu. Summary of General Chemistry lecture - internal documents (For internal circulation only).

General Chemistry 2 - CHE00002

Module designation	General Chemistry 2
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Lecturers at Faculty of Chemistry, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	150 Hours Contact hours: Lectures: 30 hours (in class) Exercise: 30 hours Private study: 90 hours (self-study)
Credit points	3 Credits (5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Introduce students to the facts, concepts, and vocabulary of chemistry that will enable them to make informed decisions on issues that involve chemical concepts. Give opportunity to use the scientific method to formulate explanations for events in the natural world. Explore the role of measurement in the development of these explanations and the use of logic to test the validity of claims. Show relationships of chemistry to other disciplines, such as mathematics and the biological sciences. Demonstrate the application of chemistry concepts in the everyday world. Give opportunity to apply learned concepts in new situations of both practical and theoretical significance. Give opportunity to read selected scientific materials and apply appropriate language to describe and analyze scientific events. Develop students' scientific problem-solving skills through sequential, mathematically oriented assignments.
Content	The contents are chemical thermodynamics, chemical kinetics, general chemical equilibria, acid and base

	equilibria, pH, buffers, ionic compound solubility and equilibria electrochemistry.
Examination forms	Written exam Midterm test: 35% Quiz or Assignment: 15% Final test: 50%
Study and examination requirements	Minimum attendance at lectures is 80% Final score is greater or equal to 5.0/10.0
Reading list	1. Ralph H. Petrucci, F. G. Herring, J. Madura, C. Bissonnette (2011), *General Chemistry, Principles and Modern Applications*. 10th Edition. Pearson Canada. 2. Nguyen Dinh Soa (2000). General Chemistry (in Vietnamese). VNU-HCM Press. 3. Petrucci, R.H; Harwood, W.S; Herring, F.G (2002). General Chemistry. 8th Ed. USA: Prentice Hall.

General Chemistry Laboratory 1 - CHE00081

Module designation	General Chemistry Laboratory 1
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Lecturers at Faculty of Chemistry, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	90 Hours Contact hours: Exercise: 60 hours Private study: 30 hours (self-study)
Credit points	2 Credits (4 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: • General Chemistry 1 (CHE00001)

Module objectives/intended learning outcomes	1. Describe the chemical processes of experiments 2. Use the equipment in chemistry lab correctly 3. Calculate, write chemistry laboratory report correctly 4. Work in the lab safely, scientifically
Content	The objective of the general chemistry laboratory course is to become proficient in techniques used by practicing chemist, to use and handle safely and properly laboratory glassware, to carry out experiments safely and carefully in the laboratory, to obtain data accurately and to manipulate the data correctly. This course also complements and consolidates the theoretical knowledge acquired in the general chemistry lecture course. In as much as this course is only a supplement to general chemistry lecture courses, students must have had the general chemistry lecture.
Examination forms	Written exam Midterm test: 20% Experimental Reports: 60% Final test: 20%
Study and examination requirements	Minimum lab hours: 7/9 If score of the final exam ≤ 3, the final score will be (midterm test) *20% + (Average of Experimental Reports) *30% + (Final exam) *20%.
Reading list	1. General Chemistry Laboratory 1, Hoàng Ngọc Cường (2023). 2. General Chemistry Laboratory 1-Prelab-Report, Hoàng Ngọc Cường (2023).

General Chemistry Laboratory 2 - CHE00082

Module designation	General Chemistry Laboratory 2
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Lecturers at Faculty of Chemistry, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective

Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	90 Hours Contact hours: Exercise: 60 hours Private study: 30 hours (self-study)
Credit points	2 Credits (4 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: • General Chemistry 2 (CHE00002)
Module objectives/intended learning outcomes	1. Describe the chemical processes of experiments 2. Use the equipment in chemistry lab correctly 3. Calculate, write chemistry laboratory report correctly 4. Work in the lab safely, scientifically
Content	General Chemistry Laboratory 2 is an introductory course to the general chemistry laboratory. The overall goal of this course is to introduce general chemistry focused on understanding the concepts within the labs and the scientific method. These concepts include but are not limited to: understanding basic operation in a chemistry laboratory, components of matter, stoichiometry, determination of concentration by titration, weight measuring, preparation and properties of inorganic and organic substances.
Examination forms	Written exam Midterm test: 20% + Experimental Reports: 60% + Final test: 20%
Study and examination requirements	Minimum lab hours: 7/9 If score of the final exam ≤ 3, the final score will be (midterm test) *20% + (Average of Experimental Reports) *30% + (Final exam) *20%.
Reading list	1. Hoang Ngoc Cuong, *General Chemistry Laboratory 2 Manual*. (in Vietnamese).

General Law - BAA00004

Module designation	General Law
Semester(s) in which the module is taught	1st semester

Person responsible for the module	Lecturers at School of Political and Administration Sciences, VNU-HCM
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lectures, seminars
Workload (incl. contact hours, self-study hours)	Total workload: 135 hrs Contact hours (lectures): 45 hrs Private study including examination preparation, specified in hours: 90 hrs
Credit points	3 Credits (4.5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	After completing the course, students will be able to: General Objective: Understand the basic legal concepts and terms related to the country's legal system and state apparatus; apply legal provisions to solve some simple case studies; help students form and develop some skills such as looking up legal documents, analyzing legal regulations, and working in groups, thereby improving their sense of survival, learning and working following the Constitution and regulations. The law, the right behavior orientation in life. Specific objectives/course output standards: Knowledge: Present basic legal concepts and terms related to the state apparatus and the Vietnamese legal system; Solve some exercise cases based on the provisions of a law book in the legal system of Vietnam. Skills: Analyzing legal regulations; Lookup legal documents; Working group. Attitude, diligence: Raise awareness of living, studying, and working following the Constitution and the law.
Content	The module provides knowledge about the structure of the State apparatus as well as the functions, authority, and legal status of agencies in the State apparatus of the Socialist

	Republic of Vietnam in terms of economic management, Legal nature, and structure of the system of legal documents. From an overview of the system of legal branches in our State's legal system, a course is devoted to studying the basic contents of administrative law, civil law, and criminal law as branches of law. the main law (original branches of law) of the legal system, so that learners can easily access themselves to other branches of law arising from these major branches of law.
Examination forms	Written exam, Multiple choices, Oral presentation
Study and examination requirements	Minimum attendance at lectures is 80% Final score is greater or equal to 5.0/10.0
Reading list	1. *General Law textbook*, Ho Chi Minh City University of Law. 2. *Textbook of Theory of State and Law*, Hanoi University of Law.

General Physics 1 (Mechanics and Thermodynamics) - PHY00001

Module designation	General Physics 1 (Mechanics and Thermodynamics)
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Prof. Chau Van Tao (Faculty of Physics and Engineering Physics, University of Science, VNU-HCM)
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, discussion.
Workload	135 Hours Contact hours: Lectures: 45 hours (in class) Private study: 90 hours (self-study)
Credit points	3 Credits (4.5 ETCS)
Required and recommended prerequisites for joining the module	None

Module objectives/intended learning outcomes	This course covers the principles of kinematics, dynamics, statics, work, energy, linear momentum, gravitation, and thermodynamics. Students who complete this module could achieve the following: Knowledge: Be able to understand and apply laws of mechanics to explain physical phenomena and solve problems; Be able to understand and apply mechanisms of heat transfer, equations of state, the first and the second law of thermodynamics. Skills: Be able to work at an individual level and group work. Competence: Ability to apply mechanics and thermodynamics knowledge to analyze physical situations. Attitude: Honest
Content	This module includes the following topics: 1. Physics and measurement 2. Kinematics of particles 3. Force and Newton's laws 4. Conservation laws in classical mechanics 5. Kinetics of rigid bodies 6. The ideal gas 7. The first law of thermodynamics 8. The second law of thermodynamics
Examination forms	Class discussion. Quizzes and projects. Mid-term and Final exam: Written exam (closed book).
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	Main books: 1. Nguyen Nhat Khanh (2005). *Mechanics and thermodynamics lectures*. VNU-HCM Press. References: 1. Nguyen Thanh Van. (2013). *General Physics 1*. VNU-HCM Press.

	2. Raymond A. Serway, John W. Jewett, Sr, (2014). *Physics for Scientists and Engineers with Modern Physics*. Brooks/Cole Publishing Company, USA. 3. Alan Giambattista, Betty McCarthy Richardson, Robert C. Richardson, (2010). *Physics*. McGrawHill Companies, Inc, USA.

General Physics 2 (Electromagnetism - Optics) - PHY00002

Module designation	General Physics 2 (Electromagnetism - Optics)
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Assoc. Prof. Huynh Truc Phuong (Faculty of Physics and Engineering Physics, University of Science, VNU-HCM)
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, lesson, discussion
Workload	135 Hours Contact hours: Lectures: 45 hours (in class) Private study: 90 hours (self-study)
Credit points	3 Credits (4.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: 1. General Physics 1 (PHY00001)
Module objectives/intended learning outcomes	This module provides basic knowledge of electric and magnetic fields and thereby an understanding of the laws and phenomena of light optics. Students who complete this module could achieve the following: Knowledge: Be able to understand and apply knowledge of electromagnetism and optics in science and life. Skills: Be able to work at individual level and teamwork. Competence: Ability to apply electromagnetism and optics knowledge to analyze physical situations. Attitude: Honesty and diligence
Content	This module includes the following topics:

	1. Electric charge and electric field 2. Conductors in an electric field 3. Electric current and magnetic field 4. Electromagnetic induction and applications 5. The background of light optics 6. Interference of light 7. Diffraction of light 8. Polarization of light
Examination forms	Oral presentation Mid-term and Final exam: written exam (closed book)
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	Main books: 1. Nguyen Thanh Van. (2015). *General Physics*. (in Vietnamese). VNU-HCM Press. References: 1. Le Vu Tuan Hung (2015). *Optics*. (in Vietnamese). VNU-HCM Press. 2. Raymond A. Serway, John W. Jewett, Sr (2014). *Physics for Scientists and Engineers with Modern Physics*. 9th Edition. BROOK/COLE, USA. 3. Alan Giambattista, Betty McCarthy Richardson, Robert C. Richardson (2010). *Physics*. 2nd Edition. McGrawHill, USA.

History of Vietnamese Communist Party - BAA00104

Module designation	History of Vietnamese Communist Party
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	Lecturers at School of Political and Administration Sciences, VNU-HCM
Language	Vietnamese
Relation to curriculum	Compulsory

Teaching methods	Lecture, lesson, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	90 Hours Contact hours: Lectures: 30 hours (in class) Private study: 60 hours (self-study)
Credit points	2 Credits (3 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	In terms of content: providing systematic and basic knowledge about the birth of the Communist Party of Vietnam (1920-1930), the Party's leadership over the Vietnamese revolution during the period of political struggle. government authority (1930-1945), in two resistance wars against French colonialism and American imperialism (1945-1975), in the cause of national construction and defense during the country's transition to socialism. association, conducting renovation work (1975-2018). Ideologically: Through historical events and experiences on the leadership of the Party to build a sense of respect for objective truths, raise pride and confidence in the Party's leadership cause. About skills: Equipping with scientific thinking methods on history, skills in choosing research materials, studying subjects and the ability to apply historical awareness to practical work, criticizing misconceptions on the history of the Party.
Content	The course provides systematic and fundamental knowledge about the birth of the Communist Party of Vietnam (19201930), the Party's leadership for the Vietnamese revolution during the period of struggle for power (1930-1945), during the two resistance wars against the French colonialists and the American imperialists (1945-1975), in the cause of national construction and defense during the period of the whole country's transition to socialism, conducted doi moi (1975-2018). Through historical events and experiences in the leadership of the Party to build a

	sense of respect for objective truth, heighten pride and confidence in the Party's leadership cause. Equip with scientific thinking methods on history, skills in choosing research materials, studying subjects, and the ability to apply historical awareness to practical work, and criticize misconceptions about the history of the Party.
Examination forms	Class discussion. Group presentations and reports. Mid-term exam: essay (opened book). Final exam: essay (closed book).
Study and examination requirements	Regulations for group presentations Forming a group: 5 students/group. The deadline for group topic registration on the forum is session 2 or directly submit it to the lecturer at the exam. Week 4 (4th session) begins to present in order. Note that the presenting groups need to fully show up and bring along all relevant documents. Submission form: submit files and minutes of group work via email to the lecturer. Regulations on time, attendance and discipline in the course: attend class on time and at least 80% of the sessions (only to be absent for a maximum of 20%). Exam ban is applied to those who miss more than the regulated number of sessions. Students must have test scores, lively discussions, constructive and serious statements in class.
Reading list	*Curriculum of the History of the Communist Party of Vietnam*, Issued by the Ministry of Education and Training.

Ho Chi Minh's Ideology - BAA00003

Module designation	Ho Chi Minh's Ideology
Semester(s) in which the module is taught	4th semester
Person responsible for the module	Lecturers at School of Political and Administration Sciences, VNU-HCM

Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lecture, lesson, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	90 Hours Contact hours: Lectures:30 hours (in class) Private study: 60 hours (self-study)
Credit points	2 Credits (3 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	About knowledge: Equip students with basic knowledge about the concept, origin, the process of formation and development of Ho Chi Minh thought; the basic contents of Ho Chi Minh's thought; the application of the Communist Party of Vietnam in the national-democratic revolution and the socialist revolution, in the current national renewal process. About skills: Helping students to think, analyze, evaluate, and creatively apply Ho Chi Minh's Thoughts to solve problems in real life, study, and work. About attitudes: Helping students improve their political bravery, patriotism, loyalty to the goal, the ideal of national independence associated with socialism; aware of the role and value of Ho Chi Minh's thought for the Vietnamese Party and nation; realize their responsibility in studying and training to contribute to the construction and defence of the country.
Content	Description of course content: the subject equips students with basic knowledge about objects, research methods, and learning meanings of Ho Chi Minh's ideology; on the basis, of the process of formation and development of Ho Chi Minh thought; on national independence and socialism; on the Communist Party and the State of Vietnam; on great national and international solidarity; about culture, ethics, people.

Examination forms	Class discussion. Group presentations and reports. Mid-term exam: Multiple choice (closed-book) or essay (opened-book). Final exam: Essay (opened book).
Study and examination requirements	Regulations for group presentations Forming a group: 5 students/group. The deadline for group topic registration on the forum is session 2 or directly submit it to the lecturer at the exam. Week 4 (4th session) begins to present in order. Note that the presenting groups need to fully show up and bring along all relevant documents. Submission form: submit files and minutes of group work via email to the lecturer. Regulations on time, attendance, and discipline in the course: attend class on time and at least 80% of the sessions (only to be absent for a maximum of 20%). Exam ban is applied to those who miss more than the regulated number of sessions. Students must have test scores, lively discussions, constructive and serious statements in class.
Reading list	1. *Textbook of Ho Chi Minh's Thoughts*, National Political Publishing House of Vietnam. 2. *Study Guide for Ho Chi Minh's Thoughts*. VNU-HCM Press.

Human and Environment - ENV00003

Module designation	Human and Environment
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	MSc. Le Cong Man (Faculty of Biology and Biotechnology, University of Science, VNU-HCM)
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, disscusion

Workload (incl. contact hours, self-study hours)	(Estimated) Total workload: 30 Contact hours (please specify whether lecture, exercise, laboratory session, etc.): - Lecture hours: 30 - Practical hours: 0 - Exercise hours: 0 - Extra-contact hours per week: Private study including examination preparation, specified in hours: hours
Credit points	2 Credits (3 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: General Biology Recommended prerequisites: 0
Module objectives/intended learning outcomes	Providing students with knowledge about humans' relationship with nature, including inanimate factors and other living things around humans Knowledge: knowing the position, tasks, and roles of humans in the ecosystem. Skills: recognizing results from human activities and impacts on natural and social life. Attitude, Diligence Able to practice soft skills (teamwork, presentations)
Content	Part 1: The formation of human community and society Chapter 1: Introduction Chapter 2: Ecological factors Chapter 3: Population - biome - ecosystem Chapter 4: People and the environment Chapter 5: History of human impact on the environment Part 2: Needs and products in human society Chapter 6: Essential human needs Chapter 7: Resources

	Chapter 8: Pollution Chapter 9: Environmental protection and sustainable development Chapter 10: Cultural and legal issues. Part 3: Observe and identify (from an ecological point of view) ongoing phenomena affecting the lives of humans and other living things.
Examination forms	Mini projects
Study and examination requirements	Study Requirements: 0 Examination Requirements: 1. Discuss 2. Teamwork 3. Seminar 4. Learning attitude 5. Final exam
Reading list	1. Pham Xuan Hau (1997). *Human and Environment*. (in Vietnamese). Vietnam Education Publishing House. 2. Le Van Khoa (2002). *Environmental Science*. (in Vietnamese). Vietnam Education Publishing House. 3. Nguyen Huu Nhan, Hoang Quy Tinh (2011). *Human Ecology Textbook*. (in Vietnamese). Vietnam Education Publishing House.

Introduction to Informatics - CSC00003

Module designation	Introduction to Informatics
Semester(s) in which the module is taught	1st semester
Person responsible for the module	Lecturers at Centre of Informatics, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lecture, problem, lab works
Workload (incl. contact hours, self-study hours)	Total workload: 165 hrs Contact hours:

	- Lecture hours: 15 - Practical hours: 60 - Exercise hours: 0 Private study: 90 hours (self-study)
Credit points	3 Credits (5.5 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	After completing the course, students will be able to: 1. Explain common concepts and terms related to the field of computer science. 2. Perform basic operations related to the Windows operating system and common software. 3. Create documents with professional format, structure, and presentation using software. 4. Analyze and organize data in spreadsheet format, use calculation, search, and statistical functions to create formulas for data processing and presentation. 5. Create eye-catching presentations. 6. Express concepts related to the Internet, information security on the network. 7. Be aware of searching for information and legal regulations regarding copying, sharing, and posting information on the Internet. 8. Design a basic electronic information page.
Content	• Basic understanding of IT • Basic knowledge of computers and computer networks. • Access control, ensuring data security, Malware. • Basic legal issues in using IT. • Basic computer usage • Windows operating system • Windows Explorer • Control Panel • Data compression and extraction • Typing in Vietnamese • Basic Microsoft Word • Document composition • Text formatting • Creating tables • Handling graphics in documents • Page layout and printing

	• Basic Microsoft PowerPoint • Basic presentation templates • Creating a presentation • Setting up effects for the presentation • Basic Microsoft Excel • Data formatting in Excel • References in Excel • Basic Excel functions • Printing and creating charts • Internet usage • Basic knowledge of the Internet • Information searching • Information security • Web image processing • Resizing image frames • Image cropping • Image rotation and flipping • Adjusting the brightness of an image • Adjusting the contrast of an image • Designing a basic electronic information page using HTML & CSS3.
Examination forms	Multiple choice exam, practical exam
Study and examination requirements	Minimum attendance at lectures is 80% Final score is greater or equal to 5.0/10.0
Reading list	1. *Curriculum for Basic IT Applications*, Advanced IT Applications. 2. *Microsoft Office MOS materials*, IIG Vietnam, Fahasha. 3. *IC3 Spark materials*, IIG Vietnam, Fahasha.

Labwork on General Biology I - BIO00081

Module designation	Labwork on General Biology I
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Dr. Luong Thi My Ngan (Faculty of Biology and Biotechnology, University of Science, VNU-HCM)
Language	Vietnamese
Relation to curriculum	Elective

Teaching methods	Lecture Introducing laboratory rules Divide students into groups of three or two Guide experimental procedure Monitor and examine students doing experiments
Workload (incl. contact hours, self-study hours)	(Estimated) Total workload: 30 Contact hours (please specify whether lecture, exercise, laboratory session, etc.): - Lecture hours: 0 - Practical hours: 30 - Exercise hours: 0 - Extra-contact hours per week: Private study including examination preparation, specified in hours:
Credit points	1 Credits (2 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: • General Biology I (BIO00001)
Module objectives/intended learning outcomes	Prepare temporary slides to observe cell structures and living activities. Use a microscope proficiently. Identify organic compounds (carbohydrates, proteins, lipids, enzymes like amylase). Demonstrate and measure plant respiration. Classify plants (lichens, algae, bryophytes, pteridophytes, gymnosperms, monocots, dicots). Classify animals into major orders. Use basic lab tools (test tubes, beakers, pipettes, etc.) effectively. Collaborate and assist team members to complete tasks on time. Follow lab safety rules and ensure personal and team safety.

Content	Introduction of Syllabus How to use a light microscope Cell structure; Osmosis; Chemical Composition of Cells; Enzyme Activity; Respiration; Mitosis; Microbial Diversity. Plant Diversity; Animal Diversity
Examination forms	Lab Activity and Lab Report Lab exam
Study and examination requirements	Study Requirements: Listen Do experiments Making lab report Put tools back in right places Clean up. Examination Requirements: Experimental process & Final exam
Reading list	Main textbook: 1. Lab manual: Bui Trang Viet & Le Thi My Phuoc (Editors) (2016), *Lab work on General Biology I.* (Internal circulation) 2. Class lecture (ppt file) for *Lab work on General Biology 1.* (in Vietnamese). Supplementary: 1. Dickey Jean (2003). *Laboratory Investigations for Biology*. Pearson.

Labwork on General Biology II - BIO00082

Module designation	Labwork on General Biology II
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	MSc. Phan Ngo Hoang (Faculty of Biology and Biotechnology, University of Science, VNU-HCM)

Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	preaching, guiding, discussion
Workload (incl. contact hours, self-study hours)	(Estimated) Total workload: 30 Contact hours (please specify whether lecture, exercise, laboratory session, etc.): - Lecture hours: 0 - Practical hours: 30 - Exercise hours: 0 - Extra-contact hours per week: Private study including examination preparation, specified in hours:
Credit points	1 Credit (2 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: • General Biology II (BIO00002)
Module objectives/intended learning outcomes	1. Distinguish different plant tissues and organs. 2. Understand and classify plant pigments. 3. Demonstrate environmental impacts on photosynthesis. 4. Explore respiration and fermentation in plants. 5. Identify different animal tissues and prove bioelectricity. 6. Explain hormonal effects on blood flow. 7. Understand climatic impacts on ecosystems. 8. Describe biological reactions and processes. 9. Interpret respiration and photosynthesis. 10. Explain cellular signal transduction. 11. Distinguish plant and animal structures and evolution. 12. Conduct and analyze biological experiments and biodiversity research.
Content	1. Practice theory 2. Tissue and plant organs 3. Plant pigments

	4. Photosynthesis 5. Respiration and fermentation in plants 6. Water transport of tissues 7. Animal tissues 8. Mechanical and bioelectric activities 9. Circulation of blood in the vein 10. Climate factor
Examination forms	Abstract paper: objectives, principles and methods of practice Practice report Practice and question
Study and examination requirements	Listen, take note, practising, discussing Students must not be absent in practice theory class (the first week) Students wear blouses when entering the Lab Submit practice reports at the end of the practice session Students who are absent for more than 2 practice sessions will be banned from the final exam. Examination Requirements: Homework Lab work Final examination
Reading list	Textbooks: 1. Bui Trang Viet, Phan Ngo Hoang (2009). *Practical Textbook for General Biology 2* (in Vietnamese). VNU-HCM Press. Supplementary reading: 1. Lecture notes. 2. Pham Thanh Ho (1998). *General Biology.* (in Vietnamese). Vietnam Education Publishing House.

General Physics Lab - PHY00081

Module designation	General Physics Lab
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	MSc. Huynh Thanh Nhan (Faculty of Physics and Engineering Physics, University of Science, VNU-HCM)
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lab work, discussion, practice
Workload (incl. contact hours, self-study hours)	120 Hours Contact hours: Lab work: 60 hours (in class) Private study: 60 hours (self-study)
Credit points	2 Credits (4 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	This course is a practical subject in the laboratory. This course helps students understand how to measure some physical quantities, experimental errors, analyze and evaluate measurement results. Students who complete this module could achieve the following: Knowledge: Be able to describe the process, how to measure fundamental physical quantities in the laboratory. Be able to use instruments and equipment to measure experimental data of physical quantities correctly. Be able to determine (calculate) physical quantities from measured experimental data. Be able to determine the error of experimental measurement of physical quantities. Skills: Be able to work in individual, group work, self-study, and problem solving. Competence: Be able to analyze, process and write experimental data reports. Attitude: be honest, responsible, respect for colleagues.
Content	In this module, Students practice 10 of the following 13 experiments:

	Practice 1: Density of liquid and solids. The private mass of the metals. Practice 2: Viscosity. Viscosity is dependence of different temperatures. Practice 3: Reversible pendulum. The Mathematical pendulum. Practice 4: Heat of function for ice. Determination of heat. Practice 5: Mechanical equivalent of heat. The heat capacity of metals. Practice 6: Wheatstone Bridge. Resistor is dependent of different temperatures. Practice 7: Voltmeter and Ammeter DC. Voltmeter and Ammeter AC. Practice 8: AC circuit. RLC circuit. Practice 9: Diode characteristics. Practice 10: Transistor characteristics. Practice 11: Microscope. To measure the diameter of other small objects. Practice 12: Refraction by a prism. Dispersion and resolving the power of prisms. Practice 13: Polarization of light Rotatory power.
Examination forms	Practice reports, practice exam
Study and examination requirements	Minimum attendance at Lab is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	1. Dang Van Liet, Do Dinh Luyen, Nguyen Van Nghia, Tran Thi Kim Phuong (2008). *General Physics Experiments*. (in Vietnamese). VNU-HCM Press.

Marxist-Leninist Philosophy - BAA00101

Module designation	Marxist-Leninist Philosophy

Semester(s) in which the module is taught	1st semester
Person responsible for the module	Lecturers at School of Political and Administration Sciences, VNU-HCM
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	135 Hours Contact hours: Lectures: 45 hours (in class) Private study: 90 hours (self-study)
Credit points	3 Credits (4.5 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	The course equips students with the basic contents of the worldview and the Marxist-Leninist philosophical methodology. Helping students apply knowledge about the worldview, Marxist-Leninist philosophy, and philosophy creatively in cognitive and practical activities, to solve problems that the social life of a country or of the time being set.
Content	Marxist-Leninist philosophy is a course in the Marxist-Leninist knowledge block and Ho Chi Minh Thought. This module equips students with basic, general, and systematic knowledge of the problems of Marxist-Leninist philosophy. From there, learners have a basis and reasonable research and learning methods and apply them to the process of evaluating life phenomena.
Examination forms	Class discussion. Group presentations and reports. Mid-term exam: essay (opened book). Final exam: essay (closed book)
Study and examination requirements	Regulations for group presentations

	Forming a group: 5 students/group. The deadline for group topic registration on the forum is session 2 or directly submit it to the lecturer at the exam. Week 4 (4th session) begins to present in order. Note that the presenting groups need to fully show up and bring along all relevant documents. Submission form: submit files and minutes of group work via email to the lecturer. Regulations on time, attendance and discipline in the course: attend class on time and at least 80% of the sessions (only to be absent for a maximum of 20%). Exam ban is applied to those who miss more than the regulated number of sessions. Students must have test scores, lively discussions, constructive and serious statements in class.
Reading list	1. *Textbook of basic principles of Marxism-Leninism*, National Political Publishing House of Vietnam. 2. *Textbook of Marxist-Leninist Philosophy*, National Political Publishing House of Vietnam.

Marxist-Leninist Political Economy - BAA00102

Module designation	Marxist-Leninist Political Economy
Semester(s) in which the module is taught	1st semester
Person responsible for the module	Lecturers at School of Political and Administration Sciences, VNU-HCM
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	90 Hours Contact hours: Lectures: 30 hours (in class) Private study: 60 hours (self-study)
Credit points	2 Credits (3 ETCS)

Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Firstly, equip students with basic and core knowledge of the Marxist-Leninist political economy in the context of economic development of the country and the world today. Ensure the basic, systematic, scientific, updating new knowledge, associate with practice, creativity, skills, thinking, learner quality, connectivity to overcome duplication, enhance integration and reduce the load, reduce content that is no longer relevant or scholastic content for students at non-theoretical colleges and universities. Second, on that basis, forming thinking and analytical skills, assessing and identifying the nature of economic benefit relations in the country's socio-economic development, contributing to helping students build appropriate social responsibility in the job position and life after graduation. Third, contribute to building the stance and ideology of Marxism-Leninism towards students.
Content	The program consists of six chapters: in which chapter one discusses the objects, research methods, and functions of the Marxist-Leninist Political Economy. Chapters 2 to 6 present the core content of the Marxist-Leninist political economy according to the subject's objectives. Specifically, issues such as goods, markets and the role of actors in the market economy; Producing surplus value in a market economy; Competition and monopoly in the market economy; Socialist-oriented market economy and economic interest relations in Vietnam; Industrialization, modernization, and international economic integration in Vietnam.
Examination forms	Class discussion. Group presentations and reports. Mid-term exam: essay (opened book). Final exam: essay (closed book).
Study and examination requirements	Regulations for group presentations: Forming a group: 5 students/group. The deadline for group topic registration on the forum is session 2 or directly submit it to the lecturer at the exam.

	Week 4 (4th session) begins to present in order. Note that the presenting groups need to fully show up and bring along all relevant documents. Submission form: submit files and minutes of group work via email to the lecturer. Regulations on time, attendance, and discipline in the course: attend class on time and at least 80% of the sessions (only to be absent for a maximum of 20%). Exam ban is applied to those who miss more than the regulated number of sessions. Students must have all test scores, lively discussions, constructive and serious statements in class.
Reading list	Marxist-Leninist political economy textbook for undergraduates who are not majoring in political economy.

Psychology - BAA00006

Module designation	Psychology
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	MSc. Tran Huong Thao
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	Total workload: 90 hours. Contact hours (lecture): 30 hours. Private study including examination preparation, specified in hours: 60 hours.
Credit points	2 credits (3 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Knowledge:

	• Understand the system of basic concepts of psychological science and research methods in psychology. • Understand the origin, formation and development of psychology and consciousness. • Understand the nature of human psychological processes: perception; emotion - affection; act. • Identify human psychological states. • Understand the psychological attributes that make up the personality structure. Understand the factors affecting the formation and development of personality. Skills: • Developing the capacity to study documents: Analyze, synthesize, compare, and generalize. • Form and develop the ability to identify psychological phenomena and apply learned knowledge to solve practical problems. • Consulting and consulting skills. Attitude: • Cultivate a passion for learning and studying subjects. • Forming a sense of initiative and positivity in self-study. • Form the right motivation in learning. • Raise a sense of responsibility for group activities. • Other goals: • Forming personality qualities in accordance with the requirements of the integration period. • Forming communication and behavioral skills in the community. • Forming a modern and scientific way of living and working. • Forming and developing the ability to think creatively, independently, and critically. • Reasoning skills, public speaking skills. • Form and develop teamwork skills.
Content	The course introduces learners to acquire basic knowledge about the nature and characteristics of psychological phenomena and basic psychological laws of humans (perception, emotion, will, etc.) actions and personalities...). On that basis, it helps learners to apply knowledge in

	practice to identify and distinguish basic psychological phenomena in humans. This module includes the following parts: Part 1: The Natural Basis and Social Foundation of Human Psychology. Part 2: Perception and Learning. Part 3: Emotions - Affections. Part 4: Personality and the Formation of Personality. Part 5: Deviations in Individual Psychological Behavior and Correcting Such Deviant Behavior.
Examination forms	Class discussion; Group presentations and reports. Mid-term exam: essay (opened book). Final exam: essay (closed book).
Study and examination requirements	Regulations on time, attendance, and discipline in the course: attend class on time and at least 70% of the sessions (only to be absent for a maximum of 30%). Exam ban is applied to those who miss more than the regulated number of sessions. Students must have all test scores, lively discussions, constructive and serious statements in class.
Reading list	Main textbook: 1. Nguyen Quang Uan (2015). *General Psychology: A Textbook*. (in Vietnamese). References: 1. Plotnik, R, Kouyoumdjian, H (2011). *Introduction to Psychology*. 2. Berstein, D. A., Penner, L. A., Clarke-Stewart, A., and Roy, E (2008). *Psychology*.

Scientific Socialism - BAA00103

Module designation	Scientific Socialism
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	Lecturers at School of Political and Administration

	Sciences, VNU-HCM
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	lecture, lesson, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	90 Hours Contact hours: Lectures: 30 hours (in class) Private study: 60 hours (self-study)
Credit points	2 Credits (3 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	The subject equips students with the basic contents of scientific socialism (one of the three components constituting Marxism-Leninism). Helping students apply basic knowledge of scientific socialism creatively in cognitive and practical activities, solving problems that the social life of a country, of the times being set.
Content	The subject equips students with the basic contents of scientific socialism (one of the three components constituting Marxism-Leninism). Helping students apply basic knowledge of scientific socialism creatively in cognitive and practical activities, solving problems that the social life of a country, of the times being set.
Examination forms	Class discussion. Group presentations and reports. Mid-term exam: essay (opened book). Final exam: essay (closed book).
Study and examination requirements	Regulations for group presentations Forming a group: 5 students/group. The deadline for group topic registration on the forum is session 2 or directly submit it to the lecturer at the exam.

	Week 4 (4th session) begins to present in order. Note that the presenting groups need to fully show up and bring along all relevant documents. Submission form: submit files and minutes of group work via email to the lecturer. Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures)
Reading list	1. *Textbook of Scientific Socialism*, National Political Publishing House of Vietnam. 2. *The Basic Principles of Marxism-Leninism*, National Political Publishing House of Vietnam.

Teamwork and Learning Skills - BAA00008

Module designation	Teamwork and Learning Skills
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	MSc. Tran Huong Thao
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Do lecturing, teamwork, divide students into groups to solve problems
Workload (incl. contact hours, self-study hours)	Total: 60 hours Contact hours: Lectures 30 hours (in-class). Private study: 30 hours (self-study).
Credit points	2 credits (3 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	General objectives: Specific objectives/subject output standards: Equip students with knowledge and skills about teamwork and study skills. Bringing career orientations to group work

	practice topics. Skills: teamwork, presentation, communication Attitude, diligence: serious, diligent, positive
Content	Understand the concept of groups, how to form groups, classify groups, functions, and tasks of group members. Knowing the process of teamwork, the necessary skills when working in groups. Able to plan and execute projects. Understand and apply learning skills.
Examination forms	Midterm and final exam: written exams.
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. *Team Leadership Techniques*. Tre Publishing House. 2. *Strategic Learning*. Labour & Social Publishing House.

Calculus 1B - MTH00003

Module designation	Calculus 1B
Semester(s) in which the module is taught	1st semester
Person responsible for the module	MSc. Nguyen Vu Huy
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme.
Teaching methods	Lecture, discussion
Workload (incl. contact hours, self-study hours)	Total: 90 hours. Contact hours: lectures 45 hours (in class). Private study: 45 hours (self-study).
Credit points	3 Credits (4.5 ETCS)
Required and recommended prerequisites for joining the module	None

Module objectives/intended learning outcomes	The course covers the differentiation and the integral of functions of one variable; the infinite sequences and series; their applications in the other sciences. Students who complete this module could be achieved the following: Knowledge: understand derivatives and integrals. Competences: Ability to formulate some simple mathematical models and solve them.
Content	● Functions and Limits ● Derivatives ● Applications of differentiation ● Integrals and applications of integration ● Series
Examination forms	Quizzes Mid-term and Final exam: Written exam (closed book)
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures). Final score is greater or equal to 5.0/10.0.
Reading list	1. *Calculus I Textbook*, Department of Analysis, Faculty of Mathematics and Computer Science. 2. Lecture notes, Lecture slides. 3. James Stewart (2012). *Calculus* 7th ed. Cengage Learning.

Calculus 1B Practice - MTH00081

Module designation	Calculus 1B Practice
Semester(s) in which the module is taught	1st semester
Person responsible for the module	MSc. Nguyen Vu Huy
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme.

Teaching methods	Lab works
Workload (incl. contact hours, self-study hours)	Total: 65 hours. Contact hours: 30 hours (laboratory session). Private study: 35 hours (self-study).
Credit points	1 Credits (2 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Calculus 1B (MTH00003)
Module objectives/intended learning outcomes	In this course, students will apply their knowledge from the Calculus 1B course to practical computations using Matlab software. Students who complete this module could be achieved the following: Knowledge: Basic knowledge of the Matlab programming language. Competences: Ability to to perform calculations related to derivatives, integrals, limits, and sequences on the Matlab software.
Content	● Functions and Limits ● Derivatives ● Applications of differentiation ● Integrals and applications of integration ● Series
Examination forms	Lab exercises. Mid-term and Final exam: Coding exam.
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures). Final score is greater or equal to 5.0/10.0.
Reading list	1. *Calculus I Textbook*, Department of Analysis, Faculty of Mathematics and Computer Science. 2. Lecture notes, Lecture slides. 3. James Stewart (2012). *Calculus* 7th ed. Cengage Learning.

	4. Dingyu Xue (2020). *Calculus Problem Solutions with MATLAB*. De Gruyter.

Calculus 2B - MTH00004

Module designation	Calculus 2B
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	MSc. Nguyen Vu Huy
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme.
Teaching methods	Lecture, discussion
Workload (incl. contact hours, self-study hours)	Total: 90 hours. Contact hours: 45 hours (in class). Private study: 45 hours (self-study).
Credit points	3 Credits (4.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Calculus 1B (MTH00003) ● Calculus 1B Practice (MTH00081)
Module objectives/intended learning outcomes	The course covers the differentiation and the integral of multivariable functions; the ordinary differential equations; their applications in the other sciences. Students who complete this module could be achieved the following: Knowledge: understand partial derivatives and multiple integrals with their applications; Some models with ordinary differential equations. Competences: Ability to formulate some simple mathematical models and solve them; Ability to solve some ordinary differential equations of 1st and 2nd order.
Content	● Partial derivatives ● Multiple integrals ● Vector calculus

	● Differential equations
Examination forms	Quizzes Mid-term and Final exam: Written exam (closed book)
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	1. *Calculus II Textbook*, Department of Analysis, Faculty of Mathematics and Computer Science. 2. Lecture notes, Lecture slides. 3. James Stewart (2012). *Calculus* 7th ed. Cengage Learning.

Calculus 2B Practice - MTH00082

Module designation	Calculus 2B Practice
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	MSc. Nguyen Vu Huy
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lab works
Workload (incl. contact hours, self-study hours)	Total: 65 hours. Contact hours: 30 hours (laboratory session). Private study: 35 hours (self-study).
Credit points	1 Credits (2 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Calculus 1B (MTH00003) ● Calculus 1B Practice (MTH00081) ● Calculus 2B (MTH00004)
Module objectives/intended learning outcomes	In this course, students are guided to solve exercises on differential calculus and integral calculus of multivariable

	functions, to understand and apply these concepts. Students who complete this module could be achieved the following: Knowledge: Students practice calculations to understand and apply definitions, theorems, and properties in calculus. Students know how to use computational software to perform differential and integral calculus of multivariable functions. Skill: Understand and solve calculus exercises applied in practical problems, solve calculus problems, and know how to use computational software. Attitude, Diligence: Students need to attend all classes, can ask questions about unclear issues, and answer the instructor's questions on exercises.
Content	● Rn space, partial derivatives ● Multiple integrals ● Line integrals, Surface integrals ● The order differential equations
Examination forms	Lab exercises. Mid-term and Final exam: Coding exam.
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures). Final score is greater or equal to 5.0/10.0.
Reading list	1. *Calculus II Textbook*, Department of Analysis, Faculty of Mathematics and Computer Science. 2. Lecture notes, Lecture slides. 3. James Stewart (2012). *Calculus* 7th ed. Cengage Learning. 4. Ronald, L. L., Jonathan, M. R. (2017). *Multivariable Calculus with MATLAB: With Applications to Geometry and Physics*. Springer.

Linear Algebra - MTH00030

Module designation	Linear Algebra

Semester(s) in which the module is taught	1st semester
Person responsible for the module	Dr. Le Van Luyen Dr. Bui Anh Tuan
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lectures, group work, small group solving exercises
Workload (incl. contact hours, self-study hours)	135 hours Contact hours: lectures 45 hours (in class) Private study: 90 hours (self-study)
Credit points	3 Credits (4.5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	General objectives: To be familiar with advanced mathematics. Specific objectives/course learning outcomes: Knowledge: Mastering the knowledge of matrices on number fields and applying them to solving systems of linear equations; determinants and their applications; vector spaces and linear transformations. Skills: Calculating matrices; solving system of linear equations; calculating the coordinates of the vector according to a basis in a finite dimensional vector space; changing when changing the base; representing a linear operator by a matrix; finding the image and the kernel of linear operators; using MAPLE software. Attitude: Attend all classroom sessions; discussions outside of class time.
Content	This course is taught in the first semester, initially introducing students to advanced mathematics. Besides equipping new knowledge that is necessary for freshman, this course also provides the foundation knowledge to help students carry out specialized courses.

Examination forms	Midterm and final exam: written exams.
Study and examination requirements	Midterm: 40% Final: 60%
Reading list	1. Bui, X.H., Tran, N.H., Trinh, T.D, Le, V. L. (2009). *Linear Algebra and Its Applications*, Vol 1 (in Vietnamese). VNUHCM Press. 2. Ngo, V. T. (2001). *Textbook of Linear Algebra*. (in Vietnamese). Vietnam National University Press, Hanoi. 3. David, C. L. (2011). *Linear Algebra and Its Applications*. (in Vietnamese). Pearson Education.

Linear Algebra Practice - MTH00083

Module designation	Linear Algebra 1A Practice
Semester(s) in which the module is taught	1st semester
Person responsible for the module	MSc. Pham The Nhan
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lectures, group work, small group solving exercises
Workload (incl. contact hours, self-study hours)	60 hours Contact hours: exercises 30 hours (in class) Private study: 30 hours (self-study)
Credit points	1 credit (2 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: 1. Linear Algebra (MTH00030)
Module objectives/intended learning outcomes	General objectives: To help students understand more linear algebra via doing exercise. Specific objectives/course learning outcomes: Knowledge: Mastering the knowledge of matrices on numerical fields and applying them to solving systems of linear equations; determinants and their applications; vector spaces and linear transformations.

	Skills: Calculating matrices; solving system of linear equations; calculating the coordinates of the vector according to a basis in a finite dimensional vector space; changing when changing the base; representing a linear operator by a matrix; finding the image and the kernel of linear operators; using MAPLE software. Attitude: Attend all classroom sessions; discussions outside of class time.
Content	This course is taught in the first year, initially introducing students to advanced mathematics. Besides equipping new knowledge that is necessary for freshman, this course also provides the foundation knowledge to help students carry out specialized courses.
Examination forms	Tests - process score: 30% Midterm exam: 30% Final exam: 40%
Study and examination requirements	Midterm and final exam: written exams.
Reading list	1. Bui, X.H., Tran, N.H., Trinh, T.D, Le, V. L. (2009). *Linear Algebra and Its Applications*, Vol 1 (in Vietnamese). VNUHCM Press. 2. Ngo, V. T. (2001). *Textbook of Linear Algebra*. (in Vietnamese). Vietnam National University Press, Hanoi. 3. Pham, H. D. (2009). *Computer, Program and Teach Mathematics on Maple.* (in Vietnamese). Science and Technics Publishing House.

Discrete Mathematics - MTH00041

Module designation	Discrete Mathematics
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Dr. Bui Anh Tuan
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lectures, group work, small group solving exercises

Workload (incl. contact hours, self-study hours)	135 Hours Contact hours: Lectures: 45 hours (in class) Private study: 90 hours (self-study)
Credit points	3 Credits (4.5 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	General objective: To introduce the students to the fundamentals of logic, counting principles, integers, relations, recurrence relations, and Boolean functions. Specific objectives/course learning outcomes: Knowledge: Master the fundamental knowledge of the structure of discrete mathematics and their applications. Skills: Assist students in developing the skills of inference and proof of mathematical theorems thoroughly and rigorously. Attitude: Attend at least 50% of the class time for theory sessions. Complete at least 50% of the assigned exercises.
Content	This module includes the following topics: The foundations of logic Sets and functions Counting Integers Induction and recursion Relations Boolean algebra
Examination forms	Class discussion. Quizzes Mid-term and Final exam: Written exam (closed book)
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0

Reading list	Main book: 1. Nguyen Huu Anh, *Discrete Mathematics* (in Vietnamese), Vietnam Education Publishing House, 2003 2. K. H. Rosen, *Discrete Mathematics and Its Applications*, 8th ed., McGraw Hill, 2019. References: 1. Stein, Drysdale and Bogart, *Discrete Mathematics for Computer Scientists*, Addison-Wesley, 2010.

Discrete Mathematics Practice - MTH00086

Module designation	Discrete Mathematics Practice
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	MSc. Ha Van Thao
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lectures, group work, small group solving exercises
Workload (incl. contact hours, self-study hours)	90 Hours Contact hours: exercises 30 hours (in class) Private study: 60 hours (self-study)
Credit points	1 Credits (2 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Discrete Mathematics (MTH00041)
Module objectives/intended learning outcomes	General objective: Help students master the problems of Discrete Mathematics through guidance on solving exercises. Use computer tools and programming languages to find solutions and solve problems in discrete mathematics. Specific objectives/course learning outcomes: Knowledge: Master the fundamental knowledge of the structure of discrete mathematics and their applications.

	Skills: Assist students in developing the skills of inference and proof of mathematical theorems thoroughly and rigorously. Attitude: Attend at least 50% of the class time for theory sessions. Complete at least 50% of the assigned exercises.
Content	This module includes the following topics: ● The foundations of logic ● Sets and functions ● Counting ● Integers ● Induction and recursion ● Relations ● Boolean algebra
Examination forms	● Class discussion; ● Quizzes; ● Mid-term and Final exam: Written exam (closed book).
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	1. Nguyen Huu Anh, *Discrete Mathematics*, The Education Publishing House, 2003 2. K. H. Rosen, *Discrete Mathematics and Its Applications*, 8th ed., McGraw Hill, 2019. 3. Stein, Drysdale and Bogart, *Discrete Mathematics for Computer Scientists*, Addison-Wesley, 2010.

Combinatorics - MTH00050

Module designation	Combinatorics
Semester(s) in which the module is taught	5th semester

Person responsible for the module	Dr. Nguyen Anh Thi
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lectures, group work, small group solving exercises
Workload (incl. contact hours, self-study hours)	165 hours Contact hours: Lectures 45 hours (in class) Exercises 30 exercise hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Recommended prerequisites: ● Discrete Mathematics (MTH00041)
Module objectives/intended learning outcomes	General objective: provide students with knowledge of graph theory and mathematical combinatorics. In the graph theory section, students will be introduced to basic concepts such as graphs, paths, cycles, trees and algorithms for finding the shortest-spanning tree, the shortest path. In the mathematical combinatorics section, students learn advanced counting techniques such as generating functions, the inclusion-exclusion principle and rook polynomials. In addition, the subject also introduces some advanced counting such as Catalan, Stirling and Bell numbers. Specific objectives/course learning outcomes: Knowledge: Master the fundamental knowledge of the structure of graph theory, combinatorics and their applications. Skills: Assist students in developing the skills of inference and proof of mathematical theorems thoroughly and rigorously. Attitude: Attend at least 50% of the class time for theory sessions. Complete at least 50% of the assigned exercises.
Content	This module includes the following topics: ● Elements of graph theory

	• Trees • Path problems • Generating functions • Principle of inclusion and exclusion • Advanced counting numbers
Examination forms	• Class discussion. • Assignments. • Quizzes. • Mid-term and Final exam: Written exam (closed book).
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Assignments: 20%, Midterm Exam: 30%, Final Exam: 50% Final score is greater or equal to 5.0/10.0
Reading list	1. Alan Tucker. (2012). *Applied Combinatorics*, 6th edition, JohnWiley & Sons, Inc. 2. Tran, N. D. (2001). *Advanced Discrete Mathematics* (in Vietnamese). VNUHCM Press. 3. Walter D. Wallis, John C. George. (2018). *Introduction to Combinatorics*, 2nd Edition, CRC Press. 4. K. Rosen. (2011). *Discrete Mathematics and its Applications*, 7th Edition. McGraw-Hill.

Probability and Statistics - MTH00040

Module designation	Probability and Statistics
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Dr. Hoang Van Ha, Dr. Nguyen Thi Mong Ngoc
Language	Vietnamese

Relation to curriculum	Compulsory
Teaching methods	Lecture
Workload (incl. contact hours, self-study hours)	135 Hours Contact hours: Lectures: 45 hours (in class) Private study: 90 hours (self-study)
Credit points	3 Credits (4.5 ECTS)
Required and recommended prerequisites for joining the module	Recommended prerequisites: ● Calculus 1B (MTH00003)
Module objectives/intended learning outcomes	This course provides fundamental knowledge on theory of probability and statistics. Probability is the science studying phenomenon with random effects, and techniques in statistics help to analyze data to construct appropriate statistical models and make statistical inferences. Knowledge: get familiar with basic concepts in theory of probability and statistics, supporting future advance courses. Skills & competences: cognitive and practical abilities to use this knowledge in presenting and analyzing data.
Content	This module includes the following topics: 1. Basic concepts in probability theory. 2. Random variables and probability distributions. 3. Descriptive Statistics. 4. Point estimation of parameters and confidence interval. 5. Statistical hypothesis testing. 6. Simple linear regression.
Examination forms	Midterm and final exam: written exams.
Study and examination requirements	Class-attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	Main textbook: 1. Ngoc, N. T. M. (2022). *Textbook of Probability Statistics Exercises*. VNUHCM Press. References:

	1. Dang Duc Trong (2016). *Statistical Theory* (in Vietnamese). VNUHCM Press. 2. Dinh Ngoc Thanh (2016). *Statistical Theory: Exercises and Practice*. (in Vietnamese). VNUHCM Press. 3. Douglas C. Montgomery, George C. Runger, Applied Statistics and Probability for engineers, Wiley, 7 ed., 2018.

Probability and Statistics Practice - MTH00085

Module designation	Probability and Statistics Practice
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Dr. Hoang Van Ha
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lab work
Workload (incl. contact hours, self-study hours)	75 Hours Contact hours: Practice: 30 hours (in class) Private study: 45 hours (self-study)
Credit points	1 Credits (2 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Probability and Statistics (MTH00040) Recommended prerequisites: ● Calculus 1B (MTH00003)
Module objectives/intended learning outcomes	This course provides fundamental knowledge on practical sessions using the statistical software R for theoretical lessons of the course “Mathematical Statistics” including Descriptive Statistics; parameters estimation (point estimations and interval estimations); statistical hypothesis testing and simple linear regression.

Content	This module includes the following topics: An introduction to the statistical software R. Lab sessions on descriptive statistics. Lab sessions on sample distributions. Lab sessions on parameter estimations. Lab sessions on statistical hypothesis testing. Lab sessions on simple linear regression.
Examination forms	Midterm and final exam: coding exams.
Study and examination requirements	Class-attendance: at least 80%. Overall grade: minimum 5.0/10.0.
Reading list	Main textbook: 1. Dinh Ngoc Thanh (2016). *Statistical Theory: Exercises and Practice*. (in Vietnamese). VNUHCM Press. References: 1. Dang Duc Trong (2016). *Statistical Theory* (in Vietnamese). VNUHCM Press. 2. Douglas C. Montgomery, George C. Runger, Applied Statistics and Probability for engineers, Wiley, 7 ed., 2018.

Introduction to Computer Programming - MTH00055

Module designation	Introduction to Computer Programming
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	MSc. Nguyen Hien Luong MSc. Ha Van Thao
Language	Vietnamese
Relation to curriculum	Compulsory for DS and MCS programmes
Teaching methods	Lectures, group work, small group solving exercises

Workload (incl. contact hours, self-study hours)	165 hours Contact hours: lectures 45 hours + 30 lab hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Introduce to students the logic of computer programming – how computers operate with programming languages and how to write instructions using flowchart or pseudocode; how to modularize a computer program; how to write computer programs in C language.
Content	Basic concepts of algorithms and algorithms. Describe the skills and fundamentals of computer programming. Introduction to the C programming language. Pointer. Array and string. Function. Structure.
Examination forms	Final exam: written exams.
Study and examination requirements	Test 1: 15% Test 2: 15% Test 3: 20% Final exam: 50% Final score is greater or equal to 5.0/10.0
Reading list	Main: 1. Avelino J. Gonzalez, *Computer Programming in C for Beginners*, Springer Cham, 2020. References: 1. G. McKenzie. *Programming Languages: C and C++*. Murphy & Moore Publishing, 2022

	2. Orhan Gazi. *Modern C Programming Including Standards C99, C11, C17, C23*. Springer Cham, 2023. 3. Pham Van At. *C and C# Programming Techniques: From Basics to Advanced.* Hanoi: Hanoi University of Science and Technology Publishing House, 2024.

Computational Software Laboratory - MTH00087

Module designation	Computational Software Laboratory
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	Dr. Ong Thanh Hai
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lectures, computer practices
Workload (incl. contact hours, self-study hours)	120 hours Contact hours: 60 lab hours (in class) Private study: 60 hours (self-study)
Credit points	2 Credits (4 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Students can use computational programming languages to program calculations in mechanics, analysis, numerical analysis, algebra, statistics…
Content	The course covers basic computational programming knowledge using Matlab... Applying this knowledge to write programs to solve problems in mechanics, analysis, numerical analysis, algebra, ...
Examination forms	Tests - process score: 30% Midterm exam: 30% Final exam: 40%
Study and examination requirements	Midterm and final exam: practical exercises in the laboratory.

	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. Brian, D. H., Daniel, T. V. (2007). *Essential MATLAB ® for Engineers and Scientists*, 3rd edition, Elsevier. 2. J. H. Mathews, K. D. Frink, (1999). *Numerical methods using Matlab*. 3rd Edition. Prentice Hall. 3. Ronald, L. L., Jonathan, M. R. (2017). *Multivariable Calculus with MATLAB: With Applications to Geometry and Physics*. Springer.

II. PROFESSIONAL EDUCATION KNOWLEDGE

1. BASIC KNOWLEDGE

Advanced Programming - MTH10107

Module designation	Advanced Programming
Semester(s) in which the module is taught	2nd semester
Person responsible for the module	MSc. Ha Van Thao
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Lecture, lab works
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Fundamentals of Computer Programming (MTH00055)
Module objectives/intended learning outcomes	The course equips students with the knowledge of analyzing and evaluating the complexity of algorithms. Also, it provides algorithms and programming techniques to solve real-world problems and improve the efficiency of algorithms.
Content	This module includes the following topics: Dynamic memory usage and management Strings and files Recursive technique Basic data structures in the STK library

	Some advanced algorithms and techniques
Examination forms	Final exam: written exams
Study and examination requirements	Exercises: 20% Mid-term exam: 30% Final exam: 50%
Reading list	1. Tran Dan Thu, Nguyen Thanh Phuong, Dinh Ba Tien, and Tran Minh Triet. *Programming Techniques.* Hanoi: Science and Technology Publishing House, 2014. 2. Gustedt. Jens, *Modern C*, Simon and Schuster, 2019. 3. Stroustrup, Bjarne. *A Tour of C++*. Addison-Wesley Professional, 2022. 4. Ananda Rao Akepogu, Radhika Raju Palagiri, *Data Structures and Algorithms Using C++*, Pearson India, 2024. 5. Kernighan & Ritchie, *The C Programming Language*, Prentice Hall, 1988.

Data Structures and Algorithms - MTH10405

Module designation	Data Structures and Algorithms
Semester(s) in which the module is taught	3rd semester
Person responsible for the module	MSc. Ha Van Thao
Language	Vietnamese
Relation to curriculum	Compulsory for DS and MCS programmes. Elective for others programme.
Teaching methods	lectures, exercises, practice sessions
Workload (incl. contact hours, self-study hours)	165 hours Contact hours: lectures 45 hours + 30 practical lessons in the laboratory.

	Private study: 90 hours (self-study).
Credit points	4 credits (6.5 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Fundamentals of Computer Programming (MTH00055)
Module objectives/intended learning outcomes	Present several basic knowledge of the data structure and algorithms, how to re-perform data according to problem purposes. Two basic methods of searching and eleven arrangements algorithms are presented in the second part. Chapter Three and Four will present the basic data structures. Specific objectives / course learning outcomes: Knowledge: Clearly understanding algorithms, search methods, arrangements, and dynamic data structures Skills: analyzing algorithms, generalize data, algorithm settings Attitudes, specialized: have attitudes, views, and proper perception of subjects
Content	Introduction of algorithms, analyzing the algorithms and generalizing data. Search methods and arrangement in arrays. Basic dynamic data structure: single and double linked lists, binary search trees.
Examination forms	Midterm and final exam: written exams.
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. *Data Structures and Algorithms in Python 2nd edition*, Michael T. Goodrich, Roberto Tamassia, Michael Goldwasser, 2022, John Wiley & Sons Ltd. 2. *A Common-Sense Guide to Data Structures and Algorithms: Level Up Your Core Programming*

	Skills, Wengrow, Jay. - Raleigh, 2020, NC: The Pragmatic Bookshelf 3. *Data Structures and Algorithm Analysis in C++ 4th edition*, Mark Allen Weiss, 2021, Pearson

Object-Oriented Programming - MTH10407

Module designation	Object-Oriented Programming
Semester(s) in which the module is taught	4th semester
Person responsible for the module	MSc. Nguyen Ngoc Long
Language	Vietnamese
Relation to curriculum	Compulsory for DS and MCS programmes. Elective for others programme.
Teaching methods	lecture, lab work
Workload (incl. contact hours, self-study hours)	Total: 165 hours Contact hours: lecture 45 hours + 30 exercise hours Private study: 90 hours (self-study).
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Data Structures and Algorithms (MTH10405) ● Fundamentals of Computer Programming (MTH00055)
Module objectives/intended learning outcomes	Introducing the basic principles of object-oriented methodology and object-oriented programming techniques as a basis for building later applications.
Content	The principles of object-oriented methodology. The principles for building object classes, data identification and manipulation, establishing relations between classes, especially inheritance relation and polymorphism.

	Design, build classes, definition operations and operations in C ++. Install specific relations between layers, inheritance, polymorphism in C ++.
Examination forms	Midterm and final exam: written exams/major assignment
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	Main textbooks: 1. Stroustrup, Bjarne. *Programming: Principles and Practice Using C++*. Addison-Wesley Professional, 2024. References: 1. Forouzan, Behrouz A., and Richard F. Gilberg. *C++ programming: an object-oriented approach*. McGraw-Hill, 2020. 2. Kirk, Dorothy. *Demystified Object-Oriented Programming with C+*. Packt Publishing, 2021. 3. Sundnes, Joakim. *Introduction to scientific programming with Python*. Springer Nature, 2020.

Introduction to Database Systems - MTH10312

Module designation	Introduction to Database Systems
Semester(s) in which the module is taught	4th semester
Person responsible for the module	MSc. Nguyen Hien Luong
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme; Compulsory for Specialization in Data Science and Applied Mathematics and Informatics, MCS programme. Elective for others programme.

Teaching methods	Lecture, lab works
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Introduce students to basic concepts of databases; data models; database design standards and standard forms.
Content	Basic concepts of databases. Linked entity data model, relational data model. Operations on the relational data model. SQL query language. Standard forms and normalization algorithms for databases.
Examination forms	Midterm and final exam: written exam
Study and examination requirements	Mid-term: 30%, Final exam: 70% Final score is greater or equal to 5.0/10.0
Reading list	1. R. Elsmari, S. Navathe. *Fundamentals of Database Systems 7th edition*, Addison Wesley, 2016. 2. Hector Garcia-Molina, Jeffrey Ullman, Jennifer Widom. *Database Systems: The Complete Book*. Pearson, 2008. 3. S. K. Singh. *Database Systems: Concepts, Design and Applications*. Pearson, 2009.

Computer Networks - MTH10311

Module designation	Computer Networks
Semester(s) in which the module is taught	5th semester
Person responsible for the module	Dr. Vo Duc Cam Hai
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme. Compulsory for Specialization in Applied Mathematics and Informatics, MCS programme. Elective for others programme.
Teaching methods	Lecture
Workload (incl. contact hours, self-study hours)	150 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 75 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Basic knowledge of computer networks such as distinguishing between different types of networks, understanding communication and data transmission bases in networks, and understanding the functions and services that operate at each layer of the OSI and TCP models. /IP. Students will learn skills in using software tools to capture and analyze data at each floor. Use popular services like web, file transfer, email, domain name, firewall. Configure the router device.
Content	This module includes the following topics: Chapter 1: Introduction to the overview of computer networks and the applications of computer networks in practice. Classify the types of computer networks and

	network operating systems. A brief introduction to the OSI and TCP/IP protocol stack. Chapters 2, 3, 4, 5: Introduce in detail the functions and services of the application, transport, network, and data link layers. The content taught in these chapters follows top-down approaches that will make it easy for students to acquire knowledge about networks. Chapter 6: Introduction to network security and basics such as encryption methods, authentication methods, understanding some types of network attacks and preventions to ensure network data integrity.
Examination forms	Midterm and final exam: written exams
Study and examination requirements	Diligence: 10% Midterm exam: 10% Practice: 30% Final exam: 50% Final score is greater or equal to 5.0/10.0
Reading list	1. Fred Halsall, Computer Networking, and the Internet, Fifth edition, Addison Wesley, 2005 2. F Kurose, James. Computer networking: A top-down approach. Pearson Education, 2021 3. Andrew S. Tanenbaum, Nick Feamster, David J. Wetherall, Computer Networks, Pearson (6th Edition, 2021) 4. Douglas E. Comer, Computer Networks and Internets, Pearson (6th Edition, 2015)

Mathematical Statistics - MTH10404

Module designation	Mathematical Statistics
Semester(s) in which the module is taught	4th semester
Person responsible for the module	Dr. Hoang Van Ha

Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	lectures, exercises, practice sessions
Workload (incl. contact hours, self-study hours)	Total: 145 hours. Contact hours: Lectures: 15 hours (in class) Exercises: 30 hours (in class) Practice: 30 hours (in lab) Private study: 70 hours (self-study)
Credit points	3 Credits (5.5 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: • Probability and Statistics (MTH00040) - for students of DS programme. • Measure Theory and Probability (MTH10401) - for students of other programmes.
Module objectives/intended learning outcomes	This course provides foundations of statistical inference. Students will be able to make inferences from data, making decisions and predictions. Students can apply statistical techniques to practical problems using R or SPSS.
Content	Descriptive statistics. Sampling distributions. Point estimations: definition, estimators, and estimates. Unbiasedness, efficiency, consistency. Method of moments, method of maximum likelihood, Bayes estimators. Minimum variance unbiased estimator, Cramer-Rao lower bound. Confidence interval: CI for means, variances and proportions. Hypothesis testing: basic concepts, null and alternative hypotheses, simple and compound hypotheses, type I and II errors, critical region, size and power of a test, p-value. Neyman - Pearson lemma. Likelihood Ratio tests. z-tests and t-tests. Goodness of fit test. Linear Regression.

Examination forms	Midterm and final exam: written exams.
Study and examination requirements	Homework exercises: 10% Computing exercises: 20% Mid-term: 20%. Final exam: 50%. Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. Casella, George, and Roger L. Berger. *Statistical Inference*. Cengage Learning, 2021. 2. Lehmann, Erich Leo, Joseph P. Romano, and George Casella. *Testing Statistical Hypotheses*. Vol. 3. New York: Springer, 2005. 3. Montgomery, Douglas C., and George C. Runger. *Applied Statistics and Probability for Engineers*. John Wiley & Sons, 2010.

Introduction to Data Science - MTH10171

Module designation	Introduction to Data Science
Semester(s) in which the module is taught	4th semester
Person responsible for the module	Dr. Tran Anh Tuan
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme
Teaching methods	Lecture, lab works
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)

Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Knowledge: • Understanding of data science and data science terminology • Understanding the importance and types of data Skill: • Able to analyze what type of problem a data science problem belongs to • Ability to think through the steps to perform a data science problem • Able to evaluate the process of any practical problem Attitude: • Serious and careful in establishing, analyzing, and evaluating data science problems.
Content	This module includes the following topics: Introduction to Data Science Understanding Data Common Terms in Data Science Data Science Life Cycle Common problems in Data Science
Examination forms	Final exam: written exams
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	1. Laura Igual , Santi Seguí, *Introduction to Data Science*, Springer, 2017. 2. Shah, Chirag. A hands-on introduction to data science. Cambridge University Press, 2020. 3. Blum, Avrim, John Hopcroft, and Ravindran Kannan. Foundations of data science. Cambridge University Press, 2020.

2. COMPULSORY COURSES

Introduction to Artificial Intelligence - MTH10318

Module designation	Introduction to Artificial Intelligence
Semester(s) in which the module is taught	5th semester
Person responsible for the module	Assoc. Prof. Nguyen Thanh Binh
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme; Compulsory for Specialization in Data Science and Mathematical Methods in Computer Science, MCS programme. Elective for others programme.
Teaching methods	Lecture, lab works
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Data structures and Algorithms (MTH10405) ● Discrete Mathematics (MTH00041)
Module objectives/intended learning outcomes	The course provides some basic knowledge of artificial intelligence science. The main content including Problem solving methods and applications. Focus on heuristic methods. Presenting some knowledge representation methods and some knowledge processing techniques. The problem of approximate reasoning. Introduction to some knowledge systems. Introduce some other models and methods. Ontology and Agent Concepts. At the same time,

	the course also introduces soft computing techniques such as Fuzzy, Neural networks, and genetic algorithms.
Content	Overview of the science of AI State space and the search problem Knowledge demonstration Introduction to machine learning and knowledge discovery Introducing Ontology and Intelligent Agent Introduction to Genetic Algorithms (GA) Introducing Fuzzy Logic Neural Network
Examination forms	Midterm and final exam: written exam
Study and examination requirements	Do theoretical and practical exercises (40%). Final exam (60%). Final score is greater or equal to 5.0/10.0
Reading list	1. *Artificial Intelligence A Modern Approach 4th illustrated edition*, Stuart J. Russell, Peter Norvig, 2021, Pearson 2. *Artificial Intelligence: A Textbook*, Charu C. Aggarwal, 2021, Springer International Publishing 3. *Artificial Intelligence with Python*, Teik Toe Teoh, Zheng Rong, 2022, Springer Nature Singapore

Data Mining - MTH10358

Module designation	Data Mining
Semester(s) in which the module is taught	6th semester
Person responsible for the module	Assoc. Prof. Nguyen Thanh Binh
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme.

	Compulsory for Specialization in Data Science, MCS programme. Elective for others programme.
Teaching methods	Lecture
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Fundamentals of Computer Programming (MTH00055)
Module objectives/intended learning outcomes	After successfully completing this course, students will be able to: Analyze data and carry out the steps of the data mining process Understand and apply data mining algorithms and tools that can be used to assist data analysts and data mining application developers Explain common data mining tasks such as regression, classification, clustering, and association rule mining Participate in advanced research to improve existing algorithms for each specific problem in data mining.
Content	This course is intended to introduce the knowledge mining process, concepts, technologies, and applications of data mining. In addition, this course also covers data preprocessing problems, data mining tasks, algorithms, and data mining tools that can be used to assist data analysts and analysts. Data mining application development. Subject-specific topics including overview of data mining, data mining problems, data preprocessing problems, data

	regression, data classification, clustering data mining, association rule mining, data mining application development, and advanced research topics in data mining.
Examination forms	Midterm and final exam: written exams
Study and examination requirements	Midterm: 30% Final exam: 70% Final score is greater or equal to 5.0/10.0
Reading list	Main textbooks: 1. Han, Jiawei, Jian Pei, and Hanghang Tong. *Data mining: concepts and techniques.* Morgan kaufmann, 2022. References: 1. Ardilla, Yunita, et al. *Data Mining dan Aplikasinya*. Penerbit Widina, 2021. 2. Zaki, Mohammed J., Wagner Meira Jr, and Wagner Meira. *Data mining and machine learning: Fundamental concepts and algorithms*. Cambridge University Press, 2020. 3. Witten, Ian H., et al. *Data Mining: Practical machine learning tools and techniques*. Elsevier, 2025.

Introduction to Machine Learning - MTH10353

Module designation	Introduction to Machine Learning
Semester(s) in which the module is taught	6th semester
Person responsible for the module	Dr. Huynh The Dang
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme; Compulsory for Specialization in Data Science and Mathematical Methods in Computer Science, MCS programme.

	Elective for others programme.
Teaching methods	Lecture, lab works, project
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Probability and Statistics (MTH00040) ● Linear Algebra (MTH00030) ● Introduction to Artificial Intelligence (MTH10318) ● Python for Data Science (MTH10605)
Module objectives/intended learning outcomes	Students will be provided with basic knowledge of Machine Learning including decision trees, artificial neural networks, genetic algorithms, statistical theory of hypothesis testing and Bayes, ... From that students can learn more deeply about machine learning models such as association classifiers, clustering, Bayesian networks, ... They are necessary knowledge to serve the scientific research work of students in the future.
Content	1. Linear Regression 2. Logistic Regression 3. Decision Tree 4. Random Forest 5. K-Means Clustering 6. Support Vector Machine (SVM) 7. Artificial Neural Network (ANN)
Examination forms	Final exam: written exam

Study and examination requirements	Project: 15% Final exam: 75%.
Reading list	Main textbook: 1. Anil Ananthaswamy, *Why Machines Learn: The Elegant Math Behind Modern AI*, Dutton (Penguin Random House). 2024. 2. Laurence Moroney, *AI and Machine Learning for Coders: A Programmer's Guide to Artificial Intelligence*, O'Reilly Media. 2020. 3. Python for Data Science - MTH10605

Module designation	Python for Data Science
Semester(s) in which the module is taught	5th semester
Person responsible for the module	MSc. Ha Van Thao
Language	Vietnamese
Relation to curriculum	Compulsory for DS programme;

	Compulsory for Specialization in Data Science and Mathematical Methods in Computer Science, MCS programme. Elective for others programme.
Teaching methods	Lecture
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Object Oriented Programming (MTH10407) ● Data Structure and Algorithm (MTH10405)
Module objectives/intended learning outcomes	General objective: To present basic knowledge of python programming for data science for multidimensional signal data processing in data classification or object recognition, data mining, data analysis, statistics, machine learning, …. The main content of the program will present the basis for students to be able to program in python in data science. Then students will apply the knowledge to solve large problems. Specific objectives/course output standards: Knowledge: Master the basics of python programming Skills: analyzing and applying algorithms in practice Attitude, diligence: have the right attitude, opinion, and awareness about the subject
Content	This module includes the following topics: Introduction to Python Programming Control structure

	Function Data structures in Python Object-oriented programming Support libraries
Examination forms	Midterm and final exam: written exams
Study and examination requirements	Class-attendance: 5% Practices and exercises: 5% Midterm exam: 20% Final exam: 70% Final score is greater or equal to 5.0/10.0
Reading list	Main textbooks: 1. Paul Deitel & Harvey Deitel, *Intro to Python for Computer Science and Data Science*, Pearson. 2022. 2. Anshuman Mishra, *Data Science with Python: A Complete Guide with Practical Examples and MCQs (Python Programming)*, Amazon Digital Services (Kindle edition), 27 December 2024. 3. Scikit-learn.org, scikit-learn, https://scikit-learn.org/stable/tutorial/index.html, 2024 5. https://www.python.org/, 13 June 2025.

3. ELECTIVE COURSES

Multivariate Statistics - MTH10619

Module designation	Multivariate Statistics
Semester(s) in which the module is taught	6th semester
Person responsible for the module	Dr. Nguyen Thi Mong Ngoc
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, do exercises, group work, lab works
Workload (incl. contact hours, self-study hours)	Total: 165 hours Contact hours: Lectures 45 hours (in class) Practice: 30 hours (in lab) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Linear Algebra (MTH00034) ● Algebra 2A (MTH10441) ● Mathematical Statistics (MTH10131)
Module objectives/intended learning outcomes	Equip students with the knowledge base of multidimensional statistical system processing. Apply multivariate skills and "hands-on" techniques using R or Python programming in analyzing the real data.
Content	Multivariate normal distribution, Inference about a mean vector (Hotelling's T^2 and Likelihood Ratio Tests, Confidence regions and simultaneous comparisons of Component Means, multivariate quality Control Charts, …); comparisons of several multivariate means (Comparing Mean Vectors from two population, One-Way MANOVA,

	Two-Way MANOVA, Testing for Equality of Covariance Matrices), Principal Components Analysis (PCA). Apply multivariate skills and "hands-on" techniques using R (or Python) programming in analyzing the real data.
Examination forms	Written exams
Study and examination requirements	Mid-term: 50%, Final exam: 50%.
Reading list	1. *Applied Multivariate Statistical Analysis*, Richard A. Johnson, Dean W. Wichern, 2016. 2. *An Introduction to Multivariate Statistical Analysis*, T. W. Anderson, 2003. 3. *Applied Multivariate StatisticalAnalysis*, Wolfgang Härdle, Léopold Sima, 2007. 4. *Applied Multivariate Statistics with R*, Daniel Zelterman, 2015. 5. *An R and S-PLUS Companion to Multivariate Analysis*, Everitt, B.S. 2005.

Analysis of Statistical Data - MTH10513

Module designation	Analysis of Statistical Data
Semester(s) in which the module is taught	5th semester
Person responsible for the module	Dr. To Duc Khanh
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lectures, group work
Workload (incl. contact hours, self-study hours)	120 Hours Lectures: 30 hours (in class) Practice: 30 hours (in class) Private study: 60 hours (self-study)

Credit points	3 Credits (4.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Measure Theory and Probability (MTH10401) ● Mathematical Statistics (MTH10404) Recommended prerequisites: ● Multivariate Statistics (MTH10619)
Module objectives/intended learning outcomes	The course provides students with a comprehensive perspective on data processing in general and statistical data analysis in particular. It equips students with the necessary skills to become data scientists, enabling them to independently complete an entire data processing cycle using statistical analysis methods with R programme. Knowledge: Gain a solid understanding of the steps involved in a statistical data processing cycle. Distinguish between different types of data and select appropriate approaches. Skills & competences: Through laboratory activities, the course provides the necessary tools for the data processing, using the R statistical software. By the laboratory activities and group work, the student will be able to: ● recognize and appropriately describe the case study. ● effectively apply various analytical methods to different types of data and organizational/business questions. ● increase sensitivity and criticality in the use of statistical methods with regard to case studies. ● work in a group. ● develop analytical skills and independent judgment. ● develop communication skills.
Content	This module includes the following topics: 1. Introduction to statistical data processing. 2. Data and some statistical concepts. 3. A/B testing.

	4. Linear regressions and Prediction. 5. Classification models. 6. Strategy for missing data and imbalanced data. 7. Applied survival analysis to Data science
Examination forms	Midterm exam: written exams. Final exam: project.
Study and examination requirements	Class-attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	References: 1. Peter Bruce. & Andrew Bruce. *Practical Statistics for Data Scientists*, O'Reilly Media, Inc., 2017. 2. Gareth James, Daniela Witten, Trevor Hastie & Robert Tibshirani. *An Introduction to Statistical Learning with application in R, 2nd*, Springer, 2021. 3. Alan Agresti & Maria Kateri. *Foundations of Statistics for Data Scientists*, Chapman & Hall/CRC, 2022. 4. Hadley Wickham, Garrett Grolemund. *R for Data Science: Import, Tidy, Transform, Visualize, and Model Data*, O'Reilly Media, Inc., 2016.

Linear programming - MTH10449

Module designation	Linear Programming
Semester(s) in which the module is taught	5th semester
Person responsible for the module	Assoc. Prof. Nguyen Le Hoang Anh MSc. Nguyen Manh Truong Giang
Language	Vietnamese
Relation to curriculum	Compulsory for Specialization in Optimization, AM programme.

	Elective for others programme.
Teaching methods	Lecture, do exercises, group work
Workload (incl. contact hours, self-study hours)	165 hours Contact hours: Lectures: 45 lectures hours + 30 exercises hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Provide students with the tools to solve the linear programming problem, distinguish the types of problems, the original monomorphic, dual, and synthetic methods. How to build models from real problems.
Content	Objective function, constraint, sign constraint, vocabulary, basis solution, extreme point, primal simplex method, duality.
Examination forms	Mid-term and Final exam: Written exam
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. Phan Quoc Khanh, Tran Hue Nuong, *Linear Programming* (in Vietnamese), Vietnam Education Publishing House, 2003. 2. Robert J. Vanderbei, *Linear Programming: Foundations and Extensions*, Springer, 2020. 3. Jiří Matoušek , Bernd Gärtner (2007). *Understanding and Using Linear Programming*. Springer.

Optimization Algorithms - MTH10450

Module designation	Optimization Algorithms
Semester(s) in which the module is taught	6th semester
Person responsible for the module	Assoc. Prof. Vo Si Trong Long
Language	Vietnamese
Relation to curriculum	Compulsory for Specialization in Optimization, AM programme. Elective for others programme.
Teaching methods	Lecture, lab work, group work
Workload (incl. contact hours, self-study hours)	165 hours Contact hours: Lectures: 45 lectures hours + 30 lab works hours (in class) Private study: 90 hours (self-study)
Credit points	4 credits (6.5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Provide students with knowledge and methods to solve constrained and unconstrained optimization problems.
Content	1. Basic properties and concepts of algorithms, Direct/Indirect line search method for unconstrained optimization problem. 2. Deep reduction method, gradient method and conjugate gradient method.

	3. Newton and quasi-Newton methods. 4. The least squares problem. Kuhn-Tucker Optimality Conditions.
Examination forms	Mid-term and Final exam: Written exam.
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. Nocedal J, Wright SJ: *Numerical optimization*. Springer, New York, 1999 2. Polak Elijah, *Optimization: algorithms and consistent approximations*, Springer, 1997. 3. Alaa Khamis (2024). *Optimization Algorithms*. Manning Publications.

Operations Research - MTH10446

Module designation	Operations Research
Semester(s) in which the module is taught	5th semester
Person responsible for the module	MSc. Nguyen Van Thuy
Language	Vietnamese
Relation to curriculum	Compulsory for Specialization in Optimization, AM programme. Elective for others programme.
Teaching methods	Lecture, do exercises, group work
Workload (incl. contact hours, self-study hours)	180 Hours

	Contact hours: Lectures: 60 hours (in class) Private study: 120 hours (self-study)
Credit points	4 Credits (6 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: • Linear Programming (MTH10449)
Module objectives/intended learning outcomes	Provide students with knowledge and applications of linear programming problems in the form of graphs, networks, and some practical applications.
Content	Basic concepts of graphs and trees. Algorithms of network problems. Network diagram methods. Concepts of transport problems and algorithms.
Examination forms	Mid-term and Final exam: Written exam
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	1. Phan Quoc Khanh, *Operations Research* (in Vietnamese), Vietnam Education Publishing House, 2004. 2. Phan Quoc Khanh, Tran Hue Nuong, *Linear Programming* (in Vietnamese), Vietnam Education Publishing House, 2003. 3. Frederick Hillier, Gerald Lieberman (2021). *Introduction to Operations Research*, 11th ed. Mc Graw Hill.

Social Network Analysis - MTH10624

Module designation	Social Network Analysis
Semester(s) in which the module is taught	7th semester
Person responsible for the module	Dr. Tran Anh Tuan
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, lab works
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Data Structures and Algorithms (MTH10405)
Module objectives/intended learning outcomes	Students who complete this course can: Apply document reading, report writing, and presentation skills. Understand social network models (small world and Barábasi-Albert models) and information diffusion and spread models on social networks. Use social network models in real-life social network analysis. Understand the steps to build a recommendation system based on analytical information on social networks. Apply learned knowledge to develop practical applications with social networks.
Content	This module includes the following topics: Review graph theory

	Metrics in the network Network models Community analysis Diffusion of information in social networks Influence and engagement Recommendation system in social networks
Examination forms	Final exam: written exams
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	Main textbook: 1. *Social Media Mining: An Introduction*, Draft version, Reza Zafarani, Mohammad Ali Abbasi, and Huan Liu, Cambridge University Press, UK, 2014 References: 1. *Networks, Crowds, and Markets: Reasoning About a Highly Connected World*, Draft version, David Easley and Jon Kleinberg, Cambridge University Press, UK, 2010. 2. *Introduction to Mining and Analyzing Social Media Minitrack*, Dave King, Hawaii International Conference on System Sciences, Jan. 2013 3. *Introduction to the Special Issue: Mining social media*, Cortizo, José Carlos; Carrero, Francisco M.; Gómez, José María, International Journal of Electronic Commerce, Spring 2011, Vol.15(3). 4. *Introduction to Data Analytics and Data Mining for social media Minitrack*, Haughton, Dominique M.; Xu, Jennifer J.; Yates, David J.; Yan, Xiangbin, Hawaii International Conference on System Sciences, Jan. 2016

Mathematical Finance Models - MTH10203

Module designation	Mathematical Finance Models
Semester(s) in which the module is taught	6th semester
Person responsible for the module	Dr. Nguyen Dang Minh
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, do exercises, group work
Workload (incl. contact hours, self-study hours)	165 hours Contact hours: Lectures 45 hours (in class) Practice: 30 hours (in lab) Private study: 90 hours (self-study).
Credit points	4 credits (6.5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Knowledge: Consolidate basic and advanced knowledge of probability theory to apply to solving problems in insurance and finance. Consolidate knowledge about financial markets and financial instruments as the foundation for building financial models to solve practical problems. Basic introduction to decision making theory.

	Building financial risk management models. Set up several pricing models. Skills: Applying theory to build models suitable to reality, reflecting the nature of relationships in business-finance. Using computer software to support calculations in the subject. Study attitude: attend school fully and do homework, ensure self-study time at home.
Content	This course introduces basic financial models to help students understand and apply financial knowledge to solve fundamental financial problems such as decision making, risk assessment, and valuation. … in a way that has a clear scientific basis.
Examination forms	Midterm and final exam: written exams.
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	Main textbook: 1. Oliver Linton, *Financial Econometrics: Models and Methods*, Cambridge University Press, 2019. References: 1. James R. Hitchner, *Financial Valuation: Applications and Models*, + Website, Wiley, 2017. 2. Thomas A Severini, *Introduction to Statistical Methods for Financial Models*, Chapman and Hall/;CRC Press, 2019. 3. John S. Tjia, *Building Financial Models, Third Edition: The Complete Guide to Designing, Building, and Applying Projection Models*, 3rd, McGraw Hill Professional, 2022.

	4. Avishek Nag, *Stochastic Finance with Python: Design Financial Models from Probabilistic Perspective*, Xpress, 2024.

Database Management System - MTH10344

Module designation	Database Management System
Semester(s) in which the module is taught	6th semester
Person responsible for the module	Dr. Tran Anh Tuan MSc. Nguyen Hien Luong
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, lab works
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ECTS)
Required and recommended prerequisites for joining the module	Required prerequisites: • Introduction to Database Systems (MTH10312)
Module objectives/intended learning outcomes	Students know how to access knowledge about databases and database management systems: components of the SQL Server database management system and their functions, concurrent access management mechanisms, safety and data recovery after incidents, decentralisation and security.
Content	Introduction including definition, functions, properties, architecture of database management system, SQL and Microsoft SQL server Fundamental SQL syntaxes

	Securing SQL server Stored and manage procedures Creating and managing user-defined functions Creating and managing triggers in SQL server
Examination forms	Midterm and final exam: written exam
Study and examination requirements	Class-attendance: 5% Practices and exercises: 5% Midterm exam: 20% Final exam: 70% Final score is greater or equal to 5.0/10.0
Reading list	1. Duong Quang Thien. *SQL Server 2000: T-SQL Programming.* Ho Chi Minh City: Saigon Culture Publishing House, 2007. 2. Ray Rankins, Paul Bertucci, Chris Gallelli, Alex T. Silverstein, *Microsoft SQL Server 2005 Unleashed*, Sams Publishing, 2007. 3. Brian Knightet al, *Professional SQL Server 2005 Administration*, Wrox Press, 2007. 4. Paul Turley & Dan Wood, *Beginning Transact-SQL with SQL Server 2000 and 2005*, Wrox Press, 2006.

Introduction to Big Data - MTH10606

Module designation	Introduction to Big Data
Semester(s) in which the module is taught	7th semester
Person responsible for the module	Assoc. Prof. Nguyen Thanh Binh
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, lab work

Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Provides students with foundational knowledge in big data processing. Students will learn basic techniques when handling large volumes of data as well as related databases. In addition, students learn specific applications to apply in future problems.
Content	Introduction and overview. Basic knowledge of statistics, R, and Python Types of relationships and representation methods. Non-SQL and SQL Database Graph theory Introduction of Sparks and Foreign languages learning in Sparks Streaming data and introduction of Kafka Introduction of Spark ML libraries. Some applications using Spark ML Search system. Introduction of Page Rank TensorFlow and its applications in real life
Examination forms	Final exam: project
Study and examination requirements	Practices and in class exercises: 50% Final project: 50% Final score is greater or equal to 5.0/10.0
Reading list	Mandatory: Slides and lectures.

	References: 1. Jeffrey Dean and Sanjay Ghemawat. 2008. *MapReduce: simplified data processing on large clusters*. Commune. ACM 51, 1 (January 2008), 107-113. DOI: https://doi.org/10.1145/1327452.1327492. 2. https://hadoop.apache.org/. 3. http://spark.apache.org/ 4. https://pandas.pydata.org/

Advanced Artificial Intelligence - MTH10356

Module designation	Advanced Artificial Intelligence
Semester(s) in which the module is taught	7th semester
Person responsible for the module	Assoc. Prof. Nguyen Thanh Binh
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, lab works
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	This course will present topics in Artificial Intelligence (AI). We will begin by defining the term "software agent" and discussing how software agents differ from programs in general. We will then look at those problems in the field of

	AI that tend to receive the most attention. Different researchers approach these problems differently.
Content	This module includes the following topics: Solving Problems by Searching Knowledge Representation and Reasoning
Examination forms	Final exam: written exams
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	Main textbooks: 1. Peter, Norvig, and Russell Stuart *Artificial Intelligence. A Modern Approach.* Pearson Education, USA, 2021. References: 1. Christian, Brian. *The alignment problem: How can machines learn human values?* Atlantic Books, 2021. 2. Narayanan, Arvind, and Sayash Kapoor. *"AI snake oil: What artificial intelligence can do, what it can't, and how to tell the difference."* AI Snake Oil. Princeton University Press, 2024.

Parallel Programming - MTH10352

Module designation	Parallel Programming
Semester(s) in which the module is taught	6th semester
Person responsible for the module	Prof. Le Hoai Bac
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, lab works
Workload (incl. contact hours, self-study hours)	165 Hours

	Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: • Data Structures and Algorithms (MTH10405)
Module objectives/intended learning outcomes	Through this module, students will have the opportunity to master basic definitions/concepts related to the following topics: the role of parallel processing in everyday life, problems that need to be solved in Parallel processing on computers, Tesla multi-core high-level parallel hardware architecture, CUDA parallel programming model combined with Tesla architecture, applications of parallel programming in scientific research and applications in life. In addition, students will be equipped with basic parallel programming skills using C and CUDA language on Windows/Linux platforms and knowledge of common parallel algorithms.
Content	This module includes the following topics: Overview of parallel programming on GPUs CUDA programming model Hierarchical memory organization in the CUDA programming model Tesla Hardware Architecture Controlling the flow of execution in the CUDA programming model Typical parallel algorithms with CUDA programming model. Parallel programming - Experience in algorithm design. Parallel Programming Style.
Examination forms	Final exam: multiple-choice exam (Theory + Practice)
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures)

	Final score is greater or equal to 5.0/10.0
Reading list	Main textbook: 1. Pacheco, Peter, and Matthew Malensek. *An introduction to parallel programming*. Morgan Kaufmann, 2021. References: 1. Wen-Mei, W. Hwu, David B. Kirk, and Izzat El Hajj. *Programming massively parallel processors: a hands-on approach.* Morgan Kaufmann, 2022. 2. Wen-Mei, W. Hwu, David B. Kirk, and Izzat El Hajj. *Programming massively parallel processors: a hands-on approach.* Morgan Kaufmann, 2022. 3. Ying, Mingsheng. *Foundations of quantum programming*. Elsevier, 2024.

Advanced Machine Learning - MTH10354

Module designation	Advance Machine Learning
Semester(s) in which the module is taught	7th semester
Person responsible for the module	Assoc. Prof. Pham The Bao
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture and lab work
Workload (incl. contact hours, self-study hours)	165 hours Contact hours: Lectures: 45 hours, Lab work: 30 hours Private study: 90 hours (Self-study)
Credit points	4 Credits (6.5 ETCS)

Required and recommended prerequisites for joining the module	Required prerequisites: ● Introduction to artificial intelligence (MTH10318)
Module objectives/intended learning outcomes	This course provides advanced knowledge of machine learning. Knowledge: mastering the advanced knowledge of machine learning. Skills: cognitive and practical abilities to use this knowledge in practical problems. Attitude: Have the right attitude, perspective and awareness about the subject.
Content	This module includes the following topics: Depth first, Breadth first, complexity, completeness and optimality of search methods, Implementing DFS and BFS, Iterative deepening search Using heuristics for search, hill-climbing, best-first, beam search Optimal paths, Branch and Bound, A* Parallel search, Bi-directional search Games, minimax, Alpha-beta pruning Constraint satisfaction search, Cryptographic problems, Real-time A*, Iterative-depending A* Knowledge Representation and Reasoning: Building a Knowledge Base: Propositional logic, Predicate logic, Theorem Proving.
Examination forms	Class discussion; mid-term and final term exam: written exam.
Study and examination requirements	Class - attendance: 5%. Discussion, exercises, practices: 5%. Midterm exam: 20% Final theory exam: 70%.

	Final score is greater or equal to 5.0/10.0
Reading list	Main textbooks: 1. Buduma, Nithin, Nikhil Buduma, and Joe Papa. *Fundamentals of deep learning: Designing next-generation machine intelligence algorithms*. " O'Reilly Media, Inc.", 2022. Reference: 1. Zaki, Mohammed J., Wagner Meira Jr, and Wagner Meira. *Data mining and machine learning: Fundamental concepts and algorithms*. Cambridge University Press, 2020. 2. Jung, Alexander. *Machine learning: the basics*. Springer Nature, 2022.

Data visualization - MTH10608

Module designation	Data Visualization
Semester(s) in which the module is taught	7th semester
Person responsible for the module	Dr. To Duc Khanh
Language	Vietnamese
Relation to curriculum	Compulsory for Specialization in Data Science, MCS programme. Elective for others programme.
Teaching methods	Lecture, lab work, group work
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ECTS)

Required and recommended prerequisites for joining the module	Required prerequisites: ● Measure Theory and Probability (MTH10401) ● Mathematical Statistics (MTH10404) Recommended prerequisites: ● Multivariate Statistics (MTH10619)
Module objectives/intended learning outcomes	The course provides students with a comprehensive understanding of data visualization. It equips them with the skills to identify data types and select appropriate methods and tools for visually representing data in a clear and intuitive manner, maximizing support for further analytical insights. Additionally, students will develop proficiency in using Power BI for data visualization. Knowledge: Gain a solid understanding of the fundamental principles of data visualization and the various types of charts used in the process. Skills & competences: Apply core principles effectively to create suitable visual representations. Develop the ability to choose the right chart for different data types and analytical purposes. Gain proficiency in using Power BI to create visualizations. Through laboratory activities and group work, the student will be able to: ● recognize and appropriately describe the case study; ● identify the appropriate visualiazion methods; ● teamwork; ● develop visualiazion skills and independent judgment; ● develop communication skills.
Content	This module includes the following topics: 1. Introduction to data visualization (coordinate systems and axes, color scales). 2. Visualizing a single variable (quantitative and qualitative variable: amount, proportion).

	3. Visualizing multiple variables (scatterplots, correlograms, dimension reduction). 4. Visualizing trends (smoothing, time-series). 5. Visualizing uncertainty (distribution, confidence regions).
Examination forms	Midterm exam: written exams. Final exam: project.
Study and examination requirements	Class attendance: at least 70%. Overall grade: minimum 5.0/10.0.
Reading list	References: 1. Claus O. Wilke. *Fundamentals of Data Visualization*, O'Reilly Media, 2019. 2. Knaflic, Cole Nussbaumer. *Storytelling with Data: A Data Visualization Guide for Business Professionals*, 2015. 3. Devin Knight, Erin Ostrowsky, Mitchell Pearson, Bradley Schacht. *Microsoft Power BI Quick Start Guide: The Ultimate Beginner's Guide to Data Modeling, Visualization, Digital Storytelling, and More*. Packt Publishing Limited, 2022.

Numerical Methods for Data Science - MTH10607

Module designation	Numerical Methods for Data Science
Semester(s) in which the module is taught	7th semester
Person responsible for the module	Dr. Nguyen Thi Hoai Thuong
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, lab works
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours:

	Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	General objective: Present numerical methods for processing multidimensional signal data in data classification or object recognition, data mining, data analysis, statistics, machine learning, etc. The main content of the program will present mathematical ideas of numerical methods in data science. Students will then apply knowledge to solve major exercises. Specific objectives/subject output standards: 1. Knowledge: Master the basic knowledge of numerical methods in data science 2. Skills: analyse and apply algorithms in practice 3. Attitude and diligence: have the right attitude, perspective and awareness about the subject.
Content	1. Learning theory 2. Linearity 3. Multiplicative weights and online learning 4. Optimization 5. Regression and its analysis 6. Graphical Models 7. Algorithms for massive data sets
Examination forms	Midterm and final exam: written exam
Study and examination requirements	Class-attendance: 5% Practices and exercises: 5%

	Midterm exam: 20% Final exam: 70% Final score is greater or equal to 5.0/10.0
Reading list	1. Boyd S. Vandenberghe L., *Convex Optimization*, Cambridge 2009. 2. Avrim Blum, John Hopcroft, Ravindran Kannan, *Foundations of Data Science*, Cambridge University Press 2016. 3. Rolf Wuthrich, Carole El Ayoubi. *Numerical Methods for Engineering and Data Science*. CRC Press 2025.

Deep Learning for Data Science - MTH10622

Module designation	Deep Learning for Data Science
Semester(s) in which the module is taught	6th semester
Person responsible for the module	Dr. Huynh The Dang
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, lab works, project
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	This module provides students with basic knowledge about deep learning. Students will be introduced to the current

	achievements of deep learning and the reasons that led to this. Students will learn and implement deep learning models: fully connected multi-layer neural networks for general data, convolutional neural networks for image data, and recurrent neural networks for data. sequence data. Students will also learn about methods that help improve the quality of deep learning models.
Content	This module includes the following topics: 1. Neural networks and deep learning: Introduction to deep learning 2. Basic neural network 3. Shallow neural network 4. Deep neural network 5. Deep neural network improvements: Regularization 6. Optimization 7. Select hyperparameters 8. Deep learning with image data: Convolutional networks 9. Case studies on convolutional network architecture 10. Convolutional network for object detection problem (object detection) 11. Some applications of convolutional networks 12. Deep learning with sequence data: Regression network 13. Word embedding 14. Attention mechanism
Examination forms	Final exam: project
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	Main textbook: 1. *Recommender systems*. Cham: Springer International Publishing, Aggarwal, C. C., 2016. References: 1. Kar, Pushpendu, Monideepa Roy, and Sujoy Datta. *Recommender Systems: Algorithms and Their*

	Applications. Springer Nature Singapore, Imprint: Springer, 2024. 2. Kumar, P. P., Vairachilai, S., Potluri, S., & Mohanty, S. N. (Eds.), *Recommender systems: Algorithms and applications*. CRC press, 2021. 3. Series of online courses "Deep Learning Specialization", link: https://www.deeplearning.ai/deep-learning-specialization/

Recommender System - MTH10623

Module designation	Recommender System
Semester(s) in which the module is taught	6th semester
Person responsible for the module	MSc. Huynh Thanh Son
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Lecture, lab works, project
Workload (incl. contact hours, self-study hours)	165 Hours Contact hours: Lectures: 45 hours (in class) Practice: 30 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6.5 ETCS)
Required and recommended prerequisites for joining the module	Required prerequisites: ● Introduction to artificial intelligence - MTH10318 ● Introduction to machine learning - MTH10353 ● Python for Data Science - MTH10605
Module objectives/intended learning outcomes	Recommender systems provide personalized access to information about product catalogues, social networks, and collections of documents. This course will introduce learners

	to approaches for building recommender systems, including Collaborative Filtering, Content-Based, Knowledge-Based, and Hybrid methods. Students will implement recommendation algorithms using open-source toolkits and conduct experimental evaluations.
Content	This module includes the following topics: • Introduction to Recommender Systems • Neighbourhood-based Collaborative Systems • Model-based Collaborative Recommendation • Content Based Recommender Systems • Knowledge - Based Recommender Systems • Ensemble-Based and Hybrid Recommender Systems. • Evaluating Recommender Systems
Examination forms	Final exam: project
Study and examination requirements	Minimum attendance at lectures is 80% (Absences must not exceed 3 times for the entire duration of the lectures) Final score is greater or equal to 5.0/10.0
Reading list	Main textbook: 1. Charu C. Aggarwal, *Recommender Systems: The Textbook*, Springer International Publishing Switzerland. 2016. 2. Zhe Wang, Chao Pu & Felice Wang, *Deep Learning Recommender Systems*, Cambridge University Press (Springer). 2025. 3. Seminar on Data Science - MTH10620

Module designation	Seminar on Data Science
Semester(s) in which the module is taught	7th semester
Person responsible for the module	Assigned lecturers of the Faculty of Mathematics and Computer Science, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Seminar, project
Workload (incl. contact hours, self-study hours)	150 Hours Contact hours: Discussion: 60 hours (in class) Private study: 90 hours (self-study)
Credit points	4 Credits (6 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	Learn more deeply about your major with greater self-study under the guidance of a lecturer and prepare to write a graduation thesis. Specific objectives/subject output standards: Knowledge: provides additional knowledge that is more extensive than the subjects in the major. Skills: prepare skills for deeper learning and research, such as self-study, group discussion, writing reports/presentations, arguing/justifying/defending opinions, how to find and use resources related references.

Content	Students will work directly with faculty on a topic. Topic content can be: Issues that have not been mentioned in the subjects of the major. Problems arise in specialised subjects but have not been resolved. The necessary knowledge is not included in the program to prepare for the expected graduation thesis topic. The problems of the subject will be assigned by the lecturer for students to explore, research and present. Applicable forms: Under the guidance of instructors, students choose a topic and register for research tasks, then report back. Instructors analyse and evaluate results. The lecturer selects and presents the problem. Students present their understanding of that issue.
Examination forms	Final exam: project or representation.
Study and examination requirements	Class-attendance: 15% Discussion and practices: 35% Final exam: 50% Final score is greater or equal to 5.0/10.0
Reading list	Depends on the assigned topics.

4. GRADUATING WORKS

Graduation Thesis - MTH10595

Module designation	Graduation Thesis
Semester(s) in which the module is taught	8th semester
Person responsible for the module	Assigned lecturers of the Faculty of Mathematics and Computer Science, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Project, seminar
Workload (incl. contact hours, self-study hours)	Total workload: 300 hours Contact hours: 30 hours Private study including examination preparation, specified in hours: 270 hours
Credit points	10 credits (20 ECTS)
Required and recommended prerequisites for joining the module	Successfully completed 96/131 Credits
Module objectives/intended learning outcomes	After completing the course, students will be able to: 1. Point out the research problems 2. Apply fundamental knowledge and theories to analyse the research problem; develop a research framework (model if applicable); and design a solution for the problem 3. Use appropriate techniques for solutions. 4. Demonstrate the scientific contribution and practical relevance of the research carried out. 5. Provide a consistent, well-structured Bachelor Thesis 6. Plan and manage learning process 7. Present and defend results of the thesis at the Students' Bachelor Thesis conference.

Content	Various topics
Examination forms	Graduation report
Study and examination requirements	Final-term exam: 100%
Reading list	Diverse and depends on the supervisors.

Internship - MTH10549

Module designation	Internship
Semester(s) in which the module is taught	8th semester
Person responsible for the module	Assigned lecturers of the Faculty of Mathematics and Computer Science, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Instructions, hands-on activities
Workload (incl. contact hours, self-study hours)	Total workload: 180 hours Contact hours (lectures, exercises): 90 hours Private study including examination preparation, specified in hours: 90 hours
Credit points	4 Credits (6 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	After completing the course, students will be able to: 1. Apply knowledge, skills in mathematics/applied mathematics/computer science to practice with real-life problems in company, industry. 2. Self-orient in the desired professional field. 3. Understand the impact of mathematics and computer science in a global, economic, environmental, and societal context. 4. Conduct work responsibly in cooperation with others.

	5. Write and present a report in an adequate format.
Content	1. Attendance: Students should attend 100%. Attendance will be regulated and checked. 2. Individual Assignments: Tasks are assigned by the industrial company. 3. Internship: At a company in the field corresponding to the registered major.
Examination forms	Internship report, Oral presentation
Study and examination requirements	Internship certificate issued by the company: 50% Written report and presentation graded by the faculty supervisor: 50%
Reading list	Depending on the assigned tasks and instructors.

Soft Skills - MTH10626

Module designation	Soft Skills
Semester(s) in which the module is taught	8th semester
Person responsible for the module	Assigned lecturers of the HCMC University of Technology and Education
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Instructions, conversation, hands-on activities
Workload (incl. contact hours, self-study hours)	Total workload: 60 hours Contact hours (lectures, exercises): 30 hours Private study including examination preparation, specified in hours: 30 hours
Credit points	3 credits (5 ECTS)
Required and recommended prerequisites for joining the module	None

Module objectives/intended learning outcomes	After completing the course, students will be able to: 1. Know the rules of conduct necessary in normal communication situations. 2. Prepare a piece of content for a personal presentation. 3. Resolve all kinds of conflicts in the process of teamwork. 4. Apply non-verbal communication elements in personal presentations. 5. Understand the necessary attitudes in normal communication. 6. Demonstrate the scientific contribution and practical relevance of the research carried out. 7. Understand the necessary attitudes while participating in presentations. 8. Have a sense of fulfilling assigned responsibilities when joining a group.
Content	1. Attendance: Students should attend 100%. Attendance will be regulated and checked. 2. Individual Assignments: 4 presentations about a personal ability, a story, a technology product, a work of art. 3. Mid-term examination: a group project about a social problem 4. Final-term examination: 2 group projects about global citizen and a future technology idea.
Examination forms	Oral presentation
Study and examination requirements	Assignments and mid-term exam: 50% Final-term exam: 50%
Reading list	Depending on the assigned tasks and instructors.

Entrepreneurship - MTH10627

Module designation	Entrepreneurship
Semester(s) in which the module is taught	8th semester
Person responsible for the module	Assigned lecturers of the Faculty of Interdisciplinary Science, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Elective
Teaching methods	Instructions, hands-on activities
Workload (incl. contact hours, self-study hours)	Total workload: 120 hours Contact hours (lectures, exercises): 60 hours. Private study including examination preparation, specified in hours: 60 hours
Credit points	3 credits (5 ECTS)
Required and recommended prerequisites for joining the module	None
Module objectives/intended learning outcomes	After completing the course, students will be able to: 1. Observe, explore and detect problems, thereby coming up with creative solutions to solve problems, conducting prototypes, testing, sharing and learning from experience. 2. Provide an independent, proactive, creative working environment, leadership skills, communication skills, cooperation, teamwork, organization, and leadership to adapt to the new environment.
Content	1. Attendance: Students should attend 100%. Attendance will be regulated and checked. 2. Individual/Group Assignments: Tasks are assigned by the industrial company.
Examination forms	Report, Oral presentation
Study and examination requirements	Progress engagement: 20%

	Written report: 30% Presentation graded by the faculty supervisor: 50%
Reading list	Depending on the assigned tasks and instructors.

Graduation Project - MTH10597

Module designation	Graduation Project
Semester(s) in which the module is taught	8th semester
Person responsible for the module	Assigned lecturers of the Faculty of Mathematics and Computer Science, University of Science, VNU-HCM
Language	Vietnamese
Relation to curriculum	Compulsory
Teaching methods	Project, seminar
Workload (incl. contact hours, self-study hours)	Total workload: 195 hours Contact hours: 75 hrs Private study including examination preparation, specified in hours: 120 hours
Credit points	6 credits (12 ECTS)
Required and recommended prerequisites for joining the module	Successfully completed 96/131 credits
Module objectives/intended learning outcomes	After completing the course, students will be able to: 1. Point out the research problems 2. Apply fundamental knowledge and theories to analyse the research problem; develop a research framework (model if applicable); and design a solution for the problem 3. Use appropriate techniques for solutions 4. Demonstrate the scientific contribution and practical relevance of the research carried out 5. Provide a consistent, well-structured report

	6. Plan and manage learning process 7. Present and defend results of the project at the Students' Seminar Conference.
Content	Various topics
Examination forms	Presentation, report
Study and examination requirements	Minimum attendance at lectures is 80%. Final-term exam is 100%.
Reading list	Depending on the instructors
